

# Technical Information

## Memosens CPS76E

pH/ORP sensor for process technology

Digital with Memosens 2.0 technology

### Application

Process technology and monitoring of processes with:

- Rapidly changing pH values
- High proportion of electrode poisons, such as H<sub>2</sub>S

### Your benefits

- Simultaneous measurement of pH, ORP and rH value (in rH mode)
- Newly developed, acrylamide-free gel as bridging electrolyte, sterilizable and very resistant to chemical corrosion
- Suitable for CIP/SIP cleaning, autoclavable
- Long service life thanks to poison-resistant reference with ion trap
- Integrated NTC 30K temperature sensor for effective temperature compensation
- Platinum electrode: additional use for reference impedance measurement
- Detection of glass breakage and blockage through measurement of:
  - Glass membrane resistance
  - Reference impedance
- Various optional approvals for use in hazardous areas

### Other advantages of Memosens technology

- Maximum process safety with non-contact, inductive signal transmission
- Data security thanks to digital data transmission
- Very easy to use as sensor data saved in the sensor
- Recording of sensor load data in the sensor enables predictive maintenance

## Function and system design

### Measuring principle

#### pH measurement

The pH value is used as a unit of measurement for the acidity or alkalinity of a medium. The membrane glass of the sensor supplies an electrochemical potential depending on the pH value of the medium. This potential is generated by the selective accumulation of H<sup>+</sup> ions on the outer layer of the membrane. As a result, an electrochemical boundary layer with an electrical potential difference forms at this point. An integrated Ag/AgCl reference system serves as the required reference electrode.

The measured voltage is converted to the corresponding pH value using the Nernst equation.

#### ORP measurement

The ORP potential is a unit of measurement for the state of equilibria between oxidizing and reducing components of a medium. The ORP is measured using a platinum or gold electrode. Similar to pH measurement, an integrated Ag/AgCl reference system is used as a reference electrode.

#### rH measurement

The rH value is defined as the negative common logarithm of partial pressure of hydrogen in a solution. The pH value and ORP value of a solution must be measured simultaneously to calculate the rH value.

The value is calculated using the following equation:

$$rH = 2 \cdot (mV/S) + 2 \text{ pH}$$

pH	Measured pH value
mV	Measured ORP value in mV + 207 mV (Ag/AgCl system)
S	Slope of pH electrode

The rH value is an indicator of the oxidation or reducing power of a process solution. The measuring range runs from 0 to 42.

rH values	Process medium
0 to 9	Strong reducing power
9 to 17	Weak reducing power
17 to 25	Undetermined medium
25 to 34	Weak oxidizing power
34 to 42	Strong oxidizing power

#### Reference impedance measurement

Monitoring the reference impedance is only practical with sensors whose junction can become blocked. Due to the small surface area, this is for example most feasible with sensors that use ceramic junctions.

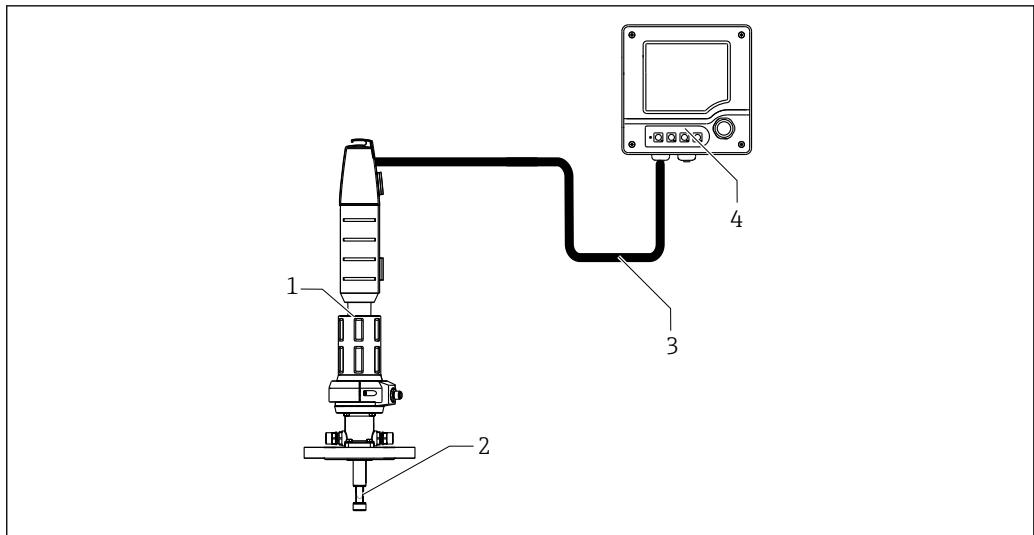

### Measuring system

A complete measuring system comprises:

- pH/ORP sensor CPS76E
- Memosens data cable CYK10 or CYK20
- Transmitter, e.g. Liquiline CM44, Liquiline CM42
- Assembly
  - Immersion assembly, e.g. Dipfit CPA111
  - Flow assembly, e.g. Flowfit CPA25
  - Retractable assembly, e.g. Cleanfit CPA871
  - Permanent installation assembly, e.g. Unifit CPA842

Additional options are available depending on the application:

Automatic cleaning and calibration system, e.g. Liquiline Control CDC90

1 Example of a measuring system for pH measurement

- 1 Retractable assembly Cleanfit CPA871
- 2 pH/ORP sensor CPS76E
- 3 Memosens data cable CYK10
- 4 Liquiline M CM42 two-wire transmitter for hazardous areas

## Communication and data processing

### Communication with the transmitter

Always connect digital sensors with Memosens technology to a transmitter with Memosens technology. Data transmission to a transmitter for analog sensors is not possible.

Digital sensors can store measuring system data in the sensor. These include the following:

- Manufacturer data
  - Serial number
  - Order code
  - Date of manufacture
- Calibration data
  - Calibration date
  - Slope at 25 °C (77 °F)
  - Zero point at 25 °C (77 °F)
  - Offset of integrated temperature sensor
  - Offset of ORP measurement
  - Number of calibrations
  - Calibration history
  - Serial number of the transmitter used to perform the last calibration or adjustment
- Operating data
  - Temperature application range
  - pH application range
  - ORP application range
  - Date of initial commissioning
  - Maximum temperature value
  - Hours of operation under extreme conditions
  - Number of sterilizations
  - CIP counter

The data listed above can be displayed with Liquiline CM42, CM44x, and Memobase Plus CYZ71D.

## Reliability

### Dependability

#### Easy handling

Sensors with Memosens technology have integrated electronics that store calibration data and other information (e.g. total hours of operation or operating hours under extreme measuring conditions). Once the sensor has been connected, the sensor data are transferred automatically to the transmitter and used to calculate the current measured value. As the calibration data are stored in the sensor, the sensor can be calibrated and adjusted independently of the measuring point. The result:

- Easy calibration in the measuring lab under optimum external conditions increases the quality of the calibration.
- Pre-calibrated sensors can be replaced quickly and easily, resulting in a dramatic increase in the availability of the measuring point.
- Thanks to the availability of the sensor data, maintenance intervals can be accurately defined and predictive maintenance is possible.
- The sensor history can be documented on external data carriers and evaluation programs, e.g. Memobase Plus CYZ71D.
- The saved application data of the sensor can be used to determine the continued use of the sensor in a targeted manner.

#### Interference immunity

#### Data security thanks to digital data transmission

Memosens technology digitizes the measured values in the sensor and transmits the data to the transmitter via a non-contact connection that is free from potential interference. The result:

- If the sensor fails or there is an interruption in the connection between the sensor and transmitter, this is reliably detected and reported.
- The availability of the measuring point is reliably detected and reported.

## Safety

### Maximum process safety

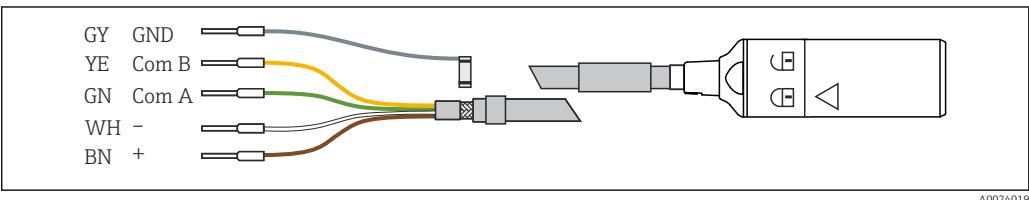

With inductive transmission of the measured value using a non-contact connection, Memosens guarantees maximum process safety and offers the following benefits:

- All problems caused by moisture are eliminated:
  - No corrosion at the connection
  - Measured values cannot be distorted by moisture
- The transmitter is galvanically decoupled from the medium. Issues concerning "symmetrical high-impedance" or "asymmetry" or the type of impedance converter are a thing of the past.
- Electromagnetic compatibility (EMC) is guaranteed by screening measures for the digital transmission of measured values.
- Intrinsically safe electronics mean operation in hazardous areas is not a problem. Complete flexibility thanks to individual Ex approvals for all components, such as sensors, cables and transmitters.

## Input

<b>Measured variable</b>	<ul style="list-style-type: none"> <li>■ pH value</li> <li>■ ORP</li> <li>■ rH value</li> <li>■ Temperature</li> </ul>
<b>Measuring range</b>	ORP: -1 500 to 1 500 mV
	<p><b>Application B</b></p> <ul style="list-style-type: none"> <li>■ pH: 0 to 14</li> <li>■ Temperature: 0 to 140 °C (32 to 284 °F)</li> </ul> <p><b>Application H</b></p> <ul style="list-style-type: none"> <li>■ pH: 0 to 12</li> <li>■ Temperature: 0 to 140 °C (32 to 284 °F)</li> </ul> <p> Pay attention to the operating conditions in the process.</p>

## Power supply

<b>Electrical connection</b>	
------------------------------	--

 2 Measuring cable CYK10 or CYK20

- ▶ Connect the Memosens measuring cable, e.g. CYK10 or CYK20, to the sensor.

 For further information on cable CYK10, see BA00118C.

## Performance characteristics

Reference system	TB and TU reference system: TP reference system:	Ag/AgCl reference lead with ion trap, bridging electrolyte: gel KCl, 3M, AgCl-free Ag/AgCl reference lead with ion trap, bridging electrolyte: gel KCl, 3M, AgCl-free, pressurized 7 bar (102 psi) (absolute); display via pressure indicator
------------------	---	--

## Installation

### Orientation

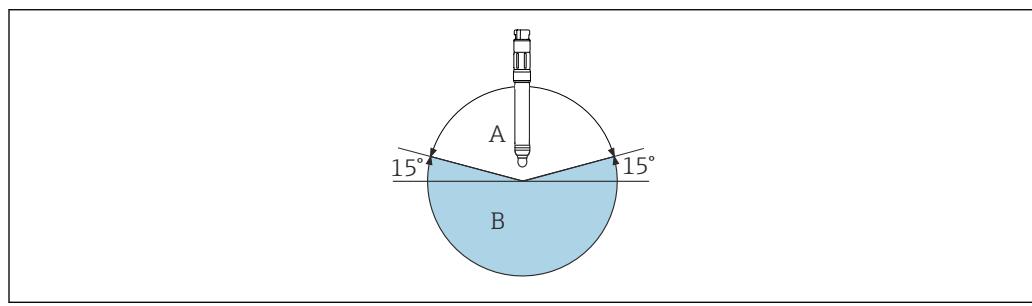

- Do not install the sensors upside-down.
- The angle of inclination from the horizontal must be at least 15°.

#### NOTICE

##### Angle of inclination of the sensor less than 15°

An air bubble forms in the glass bulb and there is then no guarantee that the pH membrane is completely covered with inner electrolyte!

- Select the installation angle of the sensor so that it does not drop below 15°.

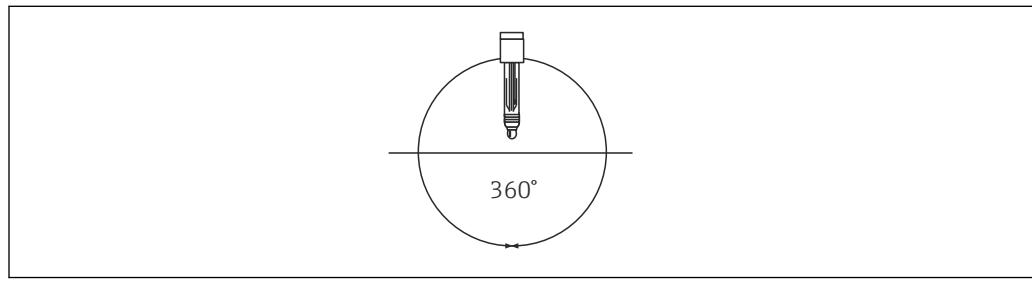

A0028039

3 Installation angle at least 15° from the horizontal

A Permitted orientation  
B Forbidden orientation

### Orientation of sensors for upside-down installation:

- The sensors are suitable for upside-down installation in accordance with the order code for "Reference system".
- Install the sensors at any angle.

A0028040

4 Any installation angle

### Installation instructions

 Follow the Operating Instructions for the assembly used for detailed information on installing the assembly.

- Before screwing in the sensor, make sure the assembly thread, the O-rings and the sealing surface are clean and undamaged and that the thread runs smoothly.

2. Hand-tighten the sensor with a torque of 3 Nm (2.21 lbf ft) (Only applies when installing in Endress+Hauser assemblies).

For detailed information on removing the moistening cap, see BA02142C

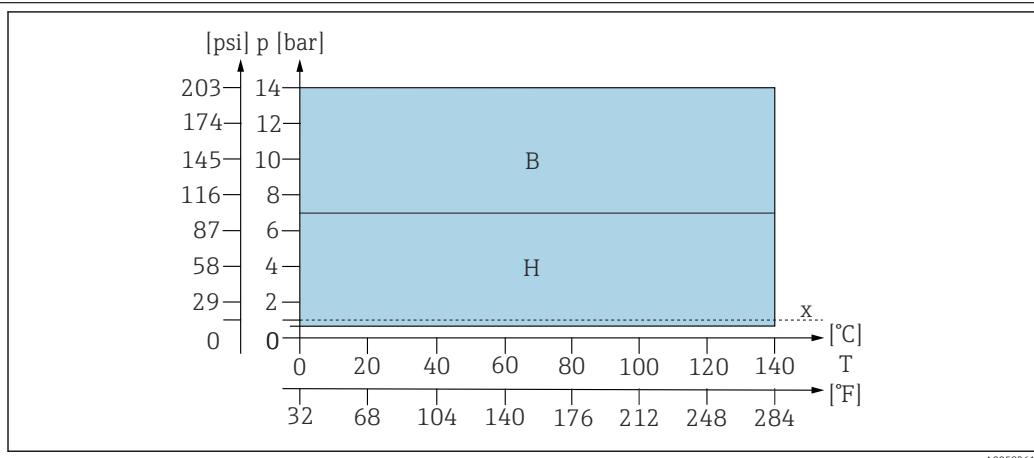

## Environment

Ambient temperature range	<b>NOTICE</b> <b>Risk of damage from frost!</b> ► Do not use the sensor at temperatures below $-15^{\circ}\text{C}$ ( $5^{\circ}\text{F}$ ) .
Storage temperature	0 to $50^{\circ}\text{C}$ (32 to $122^{\circ}\text{F}$ )
Degree of protection	IP 68 (10 m (33 ft) water column, $25^{\circ}\text{C}$ ( $77^{\circ}\text{F}$ ), 45 days, 1 M KCl)
Electromagnetic compatibility (EMC)	Interference emission and interference immunity as per: ■ EN 61326-1:2013 ■ EN 61326-2-3:2013

## Process

Process temperature range	Applications B and H: 0 to $140^{\circ}\text{C}$ (32 to $284^{\circ}\text{F}$ )  Version TB: 0 to $140^{\circ}\text{C}$ (32 to $284^{\circ}\text{F}$ ) Version TU, TP (pressurized reference): 0 to $140^{\circ}\text{C}$ (32 to $284^{\circ}\text{F}$ ) ( $140^{\circ}\text{C}$ ( $284^{\circ}\text{F}$ ) only for sterilization) Maximum $100^{\circ}\text{C}$ ( $212^{\circ}\text{F}$ ) in continuous operation due to increasing pressure loss at $T > 100^{\circ}\text{C}$ ( $212^{\circ}\text{F}$ )
Process pressure range	<b>CAUTION</b> <b>Pressurization of sensor due to prolonged use under increased process pressure</b> Possibility of sudden rupture and injury from glass splinters! ► Avoid fast heating of these pressurized sensors if they are used under reduced process pressure or under atmospheric pressure. ► When handling these sensors, always wear protective goggles and appropriate protective gloves.  Application B: 0.8 to 14 bar (11.6 to 203 psi) absolute Application H 0.8 to 7 bar (11.6 to 101.5 psi) absolute
Conductivity	10 $\mu\text{S}/\text{cm}$ (at atmospheric pressure, without flow) (minimized flow; pressure and temperature must remain constant)

<b>Additional certification</b>	<b>TÜV certificate for Memosens plug-in head</b> Pressure resistance 16 bar (232 psi) relative, minimum three times the safety pressure <b>EAC</b> The product has been certified according to Directive TP TC 020/2011 applicable in the Eurasian Economic Union (EAEU). The EAC conformity mark has been affixed to the product.
---------------------------------	---

## CRN

Since the sensor can be operated at a nominal pressure > 1 bar (15 psi), it has been registered in all Canadian provinces with a CRN (Canadian Registration Number) in accordance with CSA B51 ("Boiler, pressure vessel, and pressure piping code", category F).

## Ordering information

<b>Scope of delivery</b>	The scope of delivery comprises: <ul style="list-style-type: none"> <li>▪ Ordered version of the sensor</li> <li>▪ Operating Instructions</li> <li>▪ Safety instructions for the hazardous area (for sensors with Ex approval)</li> <li>▪ Supplementary sheet for optionally ordered certificates</li> </ul>
<b>Product page</b>	<a href="http://www.endress.com/cps76e">www.endress.com/cps76e</a>

## Accessories

The following are the most important accessories available at the time this documentation was issued.

Listed accessories are technically compatible with the product in the instructions.

1. Application-specific restrictions of the product combination are possible.  
Ensure conformity of the measuring point to the application. This is the responsibility of the operator of the measuring point.
2. Pay attention to the information in the instructions for all products, particularly the technical data.
3. For accessories not listed here, please contact your Service or Sales Center.

<b>Device-specific accessories</b>	<b>Assemblies</b> <p><b>Unifit CPA842</b></p> <ul style="list-style-type: none"> <li>▪ Installation assembly for food, biotechnology and pharmaceuticals</li> <li>▪ With EHEDG and 3A certificate</li> <li>▪ Product Configurator on the product page: <a href="http://www.endress.com/cpa842">www.endress.com/cpa842</a></li> </ul> <p> Technical Information TI01367C</p>
------------------------------------	--

**Cleanfit CPA875**

- Retractable process assembly for sterile and hygienic applications
- For in-line measurement with standard sensors with 12 mm diameter, e.g. for pH, ORP, oxygen
- Product Configurator on the product page: [www.endress.com/cpa875](http://www.endress.com/cpa875)

 Technical Information TI01168C

**Dipfit CPA140**

- pH/ORP immersion assembly with flange connection for very demanding processes
- Product Configurator on the product page: [www.endress.com/cpa140](http://www.endress.com/cpa140)

 Technical Information TI00178C

**Cleanfit CPA871**

- Flexible process retractable assembly for water, wastewater and the chemical industry
- For applications with standard sensors with 12 mm diameter
- Product Configurator on the product page: [www.endress.com/cpa871](http://www.endress.com/cpa871)

 Technical Information TI01191C

**Cleanfit CPA450**

- Manual retractable assembly for installing sensors with a diameter of 12 mm and a length of 120 mm in tanks and pipes
- Product Configurator on the product page: [www.endress.com/cpa450](http://www.endress.com/cpa450)

 Technical Information TI00183C

**Cleanfit CPA473**

- Stainless steel process retractable assembly with ball valve shutoff for particularly reliable separation of the medium from the environment
- Product Configurator on the product page: [www.endress.com/cpa473](http://www.endress.com/cpa473)

 Technical Information TI00344C

**Cleanfit CPA474**

- Plastic process retractable assembly with ball valve shutoff for particularly reliable separation of the medium from the environment
- Product Configurator on the product page: [www.endress.com/cpa474](http://www.endress.com/cpa474)

 Technical Information TI00345C

**Dipfit CPA111**

- Immersion and installation assembly made of plastic for open and closed vessels
- Product Configurator on the product page: [www.endress.com/cpa111](http://www.endress.com/cpa111)

 Technical Information TI00112C

**Flowfit CPA240**

- pH/ORP flow assembly for processes with stringent requirements
- Product Configurator on the product page: [www.endress.com/cpa240](http://www.endress.com/cpa240)

 Technical Information TI00179C

**Flowfit CPA25**

- Flow assembly for pH/ORP measurement
- Product Configurator on the product page: [www.endress.com/cpa25](http://www.endress.com/cpa25)

 Technical Information TI01710C

**Ecofit CPA640**

- Set comprising adapter for 120 mm pH/ORP sensors and sensor cable with TOP68 coupling
- Product Configurator on the product page: [www.endress.com/cpa640](http://www.endress.com/cpa640)

 Technical Information TI00246C

**Buffer solutions****High-quality buffer solutions from Endress+Hauser - CPY20**

High-quality CPY20 pH buffers ensure maximum precision in pH calibrations. Available in pH 2.0, pH 4.0, pH 7.0, pH 9.0, pH 9.2, pH 10.0 and pH 12.0. They only contain FDA-listed preservatives. Further details and Product Configurator on the product page: [www.endress.com/cpy20](http://www.endress.com/cpy20)

**ORP buffer solution CPY3**

- 220 mV, pH 7
- 468 mV, pH 0.1

Product Configurator on the product page: [www.endress.com/cpy3](http://www.endress.com/cpy3)

**Measuring cables****Memosens data cable CYK10**

- For digital sensors with Memosens technology
- Product Configurator on the product page: [www.endress.com/cyk10](http://www.endress.com/cyk10)

Technical Information TI00118C

**Memosens laboratory cable CYK20**

- For digital sensors with Memosens technology
- Product Configurator on the product page: [www.endress.com/cyk20](http://www.endress.com/cyk20)
