

# Technical Information

## Proline Prowirl F 200

Vortex flowmeter

Versatile flowmeter with detection of wet steam conditions and best-in-class accuracy

### Application

- Preferred measuring principle for wet/saturated/ superheated steam, gases & liquids (also cryogenic)
- Suitable for a wide range of applications; optimized for steam applications

### Device properties

- Wet steam capabilities for DN 25 to 300 (1 bis 12")
- Industrial siphon design for pressure measurement
- Flexible positioning of pressure cell
- Display module with data transfer function
- Robust dual-compartment housing
- Plant safety: worldwide approvals (SIL, Haz. area)

### Your benefits

- Easy energy management – integrated temperature and pressure measurement for steam and gases
- Reliable, secure measurement technology – compliance with international Vortex standard ISO 12764
- Same accuracy down to Re 10 000 – most linear Vortex meter body
- Long-term stability – robust drift-free capacitive sensor
- Convenient device wiring – separate connection compartment, various output options including Ethernet
- Safe operation – no need to open the device due to display with touch control, background lighting
- Integrated verification – Heartbeat Technology

Function and system design

Measuring principle

Vortex meters work on the principle of the *Karman vortex street*. When fluid flows past a bluff body, vortices are alternately formed on both sides with opposite directions of rotation. These vortices each generate a local low pressure. The pressure fluctuations are recorded by the sensor and converted to electrical pulses. The vortices develop very regularly within the permitted application limits of the device. Therefore, the frequency of vortex shedding is proportional to the volume flow.

A0033465

1 Sample graphic

The calibration factor (K-factor) is used as the proportional constant:

$$\text{K-Factor} = \frac{\text{Pulses}}{\text{Unit Volume [m}^3\text{]}}$$

A0003939-EN

Within the application limits of the device, the K-factor only depends on the geometry of the device. For  $Re > 10\,000$  it is:

- Independent of the flow velocity and the fluid properties viscosity and density
- Independent of the type of substance under measurement: steam, gas or liquid

The primary measuring signal is linear to the flow. After production, the K-factor is determined in the factory by means of calibration. It is not subject to long-time drift or zero-point drift.

The device does not contain any moving parts and does not require any maintenance.

### The capacitance sensor

The sensor of a vortex flowmeter has a major influence on the performance, robustness and reliability of the entire measuring system.

The robust DSC sensor is:

- burst-tested
- tested against vibrations
- tested against thermal shock (thermal shocks of 150 K/s)

The measuring device uses the tried-and-tested, capacitance measuring technology from Endress+Hauser, which is already in use in over 450 000 measuring points worldwide. Thanks to its design, the capacitance sensor is also particularly mechanically resistant to temperature shocks and pressure shocks in steam pipelines.

### Temperature measurement

The "mass" option is available under the order code for "Sensor version". With this option the measuring device can also measure the temperature of the medium.

The temperature is measured via Pt 1000 temperature sensors. These are located in the paddle of the DSC sensor and are therefore in the direct vicinity of the fluid.

Order code for "Sensor version; DSC sensor; measuring tube":

- Option AA "volume; 316L; 316L"
- Option AB "volume; Alloy C22; 316L"
- Option AC "volume; Alloy C22; Alloy C22"
- Option BA "volume high-temperature; 316L; 316L"
- Option BB "volume high-temperature; Alloy C22; 316L"
- Option CA "Mass; 316L; 316L (integrated temperature measurement)"
- Option CB "Mass; Alloy C22; 316L (integrated temperature measurement)"
- Option CC "Mass; Alloy C22; Alloy C22 (integrated temperature measurement)"

- 1 Order code for "Sensor version", option "volume" or "volume high-temperature"  
 2 Order code for "Sensor version", option "mass"

### Pressure and temperature measurement

For order code for "Sensor version; DSC sensor; measuring tube", option DA "Mass steam" and DB "Mass gas/liquid", the following applies:

- Only available for measuring instruments with the following communication protocols:
  - HART
  - PROFINET over Ethernet-APL
  - Modbus TCP over Ethernet-APL
- Oil-free or grease-free cleaning is not possible.

The "mass steam" or "mass gas/liquid" options are available under the order code for "Sensor version; DSC sensor; measuring tube". With these options, the measuring instrument can also measure the pressure and temperature of the fluid.

The temperature is measured via Pt 1000 temperature sensors. These are located in the paddle of the DSC sensor and are therefore in the direct vicinity of the fluid. Pressure measurement is located directly on the meter body at the level of the bluff body. The position of the pressure tapping was chosen so that pressure and temperature could be measured at the same point. This enables accurate density and/or energy compensation of the fluid using pressure and temperature. The measured pressure tends to be somewhat lower than the line pressure. For this reason, Endress+Hauser offers a correction to the line pressure (integrated in the device).

Order code for "Sensor version; DSC sensor; measuring tube":

- Option DA "Mass steam; 316L; 316L (integrated pressure/temperature measurement)"
- Option DB "Mass gas/liquid; 316L; 316L (integrated pressure/temperature measurement)"

### Lifelong calibration

Experience has shown that recalibrated measuring devices demonstrate a very high degree of stability compared to their original calibration: The recalibration values were all within the original measuring accuracy specifications of the devices. This applies to the measured volume flow, the device's primary measured variable.

Various tests and simulation have shown that once the radii of the edges on the bluff body are less than 1 mm (0.04 in), the resulting effect does not have a negative impact on accuracy.

If the radii of the edges on the bluff body do not exceed 1 mm (0.04 in), the following general statements apply (in the case of non-abrasive and non-corrosive media, such as in most water and steam applications):

- The measuring device does not display an offset in the calibration and the accuracy is still guaranteed.
- All the edges on the bluff body have a radius that is typically smaller in size. As the measuring devices are naturally also calibrated with these radii, the measuring device remains within the specified accuracy rating provided that the additional radius that is produced as a result of wear and tear does not exceed 1 mm (0.04 in).

Consequently, it can be said that the product line offers lifelong calibration if the measuring device is used in non-abrasive and non-corrosive media.

### Inlet run correction

Inlet run correction makes it possible to shorten the necessary inlet run before the measuring device to a minimum length of  $10 \times DN$ . If the inlet run available is too short, the measuring device can correct the measured error depending on the preceding disruption in the flow profile. This produces an additional measurement error of  $\pm 0.5\%$  o.r.<sup>1)</sup>

The **Inlet Run Correction** function can be used for the following pressure ratings and nominal diameters:

DN 15 to 150 ( $\frac{1}{2}$  to 6")

- EN (DIN)
- ASME B16.5, Sch. 40/80

**Inlet run correction** is possible for the following flow obstructions:

- Single elbow (90° elbow)
- Double elbow (2  $\times$  90° elbows, opposite)
- Double elbow 3D (2  $\times$  90° elbows, opposite, not on one plane)
- Reduction by one nominal diameter size

For detailed information on the inlet run correction, see the Operating Instructions for the device → 102

### Air and industrial gases

The measuring device enables users to calculate the density and energy of air and industrial gases. The calculations are based on time-tested standard calculation methods. It is possible to automatically compensate for the effect of pressure and temperature via an external or constant value.

This makes it possible to output the energy flow, standard volume flow and mass flow of the following gases:

- Single gas
- Gas mixture
- Air
- User-specific gas

For detailed information on the parameters, see the Operating Instructions. → 103

### Natural gas

The device enables users to calculate the chemical properties (gross calorific value, net calorific value) of natural gases. The calculations are based on time-tested standard calculation methods. It is

---

1) o.r. = of reading

possible to automatically compensate for the effect of pressure and temperature via an external or constant value.

This makes it possible to output the energy flow, standard volume flow and mass flow in accordance with the following standard methods:

Energy can be calculated based on the following standards:

- AGA5
- ISO 6976
- GPA 2172

Density can be calculated based on the following standards:

- ISO 12213-2 (AGA8-DC92)
- ISO 12213-3
- AGA NX19
- AGA8 Gross 1
- SGERG 88

For detailed information on the parameters, see the Operating Instructions. →  103

**Measuring system**

The device consists of a transmitter and a sensor.

Two device versions are available:

- Compact version - transmitter and sensor form a mechanical unit.
- Remote version - transmitter and sensor are mounted in separate locations.

**Transmitter****Proline 200**

A0013471

Device versions and materials:

- Compact or remote version, aluminum coated:  
Aluminum, AlSi10Mg, coated
- Compact or remote version, stainless:  
For maximum corrosion resistance: stainless steel CF3M

Configuration:

- Via four-line local display with key operation or via four-line, illuminated local display with touch control and guided menus ("Make-it-run" wizards) for applications
- Via operating tools (e.g. FieldCare)

**Sensor****Prowirl F**

A0034075

Flanged version:

- Nominal diameter range: DN 15 to 300 (½ to 12")
- Materials:
  - Measuring tubes  
DN 15 to 300 (½ to 12"): stainless cast steel, CF3M/1.4408  
DN 15 to 150 (½ to 6"): cast alloy, CX2MW similar to Alloy C22/2.4602
  - Flange connections  
DN 15 to 300 (½ to 12"): stainless steel, triple-certified material, 1.4404/F316/F316L
  - DN 15 to 150 (½ to 6"), pressure ratings up to PN40/Class 300: cast alloy, CX2MW similar to Alloy C22/2.4602

**Pressure measuring cell**

For order code for "Sensor version; DSC sensor; measuring tube", option DA "Mass steam" and DB "Mass gas/liquid", the following applies:

- Only available for measuring instruments with the following communication protocols:
  - HART
  - PROFINET over Ethernet-APL
  - Modbus TCP over Ethernet-APL
- Oil-free or grease-free cleaning is not possible.

A0034080

- 1 Option DA "Mass steam"  
2 Option DB "Mass gas/liquid"

Versions:

Pressure components

- Pressure measuring cell 2 bar\_a
- Pressure measuring cell 4 bar\_a
- Pressure measuring cell 10 bar\_a
- Pressure measuring cell 40 bar\_a
- Pressure measuring cell 100 bar\_a

Material

- Wetted parts:
  - Process connection  
Stainless steel, 1.4404/316L
  - Membrane  
Stainless steel, 1.4435/316L
- Non-wetted parts:
  - Housing  
Stainless steel, 1.4404

## Security

### IT security

The manufacturer warranty is valid only if the product is installed and used as described in the Operating Instructions. The product is equipped with security mechanisms to protect it against any inadvertent changes to the settings.

IT security measures, which provide additional protection for the product and associated data transfer, must be implemented by the operators themselves in line with their security standards.

### Device-specific IT security

The device offers a range of specific functions to support protective measures on the operator's side. These functions can be configured by the user and guarantee greater in-operation safety if used correctly. The following list provides an overview of the most important functions:

#### *Protecting access via hardware write protection*

Write access to the parameters of the device via the local display or operating tool (e.g. FieldCare, DeviceCare) can be disabled via a write protection switch (DIP switch on the main electronics module). When hardware write protection is enabled, only read access to the parameters is possible.

Hardware write protection is disabled when the device is delivered.

#### *Protecting access via a password*

A password can be used to protect against write access to the device parameters.

This controls write access to the device parameters via the local display or other operating tools (e.g. FieldCare, DeviceCare) and, in terms of functionality, corresponds to hardware write protection. If the CDI service interface is used, read access is only possible by first entering the password.

#### *User-specific access code*

Write access to the device parameters via the local display or operating tool (e.g. FieldCare, DeviceCare) can be protected by the modifiable, user-specific access code.

#### *Access via fieldbus*

When communicating via fieldbus, access to the device parameters can be restricted to "Read only" access. The option can be changed in the **Fieldbus writing access** parameter.

This does not affect cyclic measured value transmission to the higher-order system, which is always guaranteed.

For detailed information on device parameters, see: Description of Device Parameters.

### Advanced safety requirements

If the specified requirements for measures cannot be met, alternative measures may need to be put in place. This may involve, for example, mechanical protection of the product against tampering, the cabling, or organizational measures. The Proline measuring instruments can be used in the open field for example. Measures to combat physical tampering of the Proline measuring instruments must be arranged by the customer.

Additional analysis is required if Proline measuring instruments are integrated into a different system. Please note the following:

- The fieldbus network (OT) and company network (IT) must be strictly separated.
- Endress+Hauser recommends the segmentation of the fieldbus networks according to DIN IEC 62443-3-3.

### Network

Pay particular attention to the network components used, the router and switches for example. The operator must guarantee the integrity of the components. Access to the network must be restricted by the operator, if necessary.

### FDI Packages

Signed FDI Packages can be obtained via [www.endress.com](http://www.endress.com) for the configuration of the field device.

### User training

Depending on the application scenario, users who are not specialized in this area may come in contact with the instrument. We recommend that these users be trained in the safe use of the relevant terminals, components and/or interfaces and be made aware of security issues.

## Input

### Measured variable

#### Direct measured variables

## Measuring range

The measuring range is dependent on the nominal diameter, the fluid and environmental influences.

 The following specified values are the largest possible flow measuring ranges ( $Q_{\min} \dots Q_{\max}$ ) for each nominal diameter. Depending on the fluid properties and environmental influences, the measuring range may be subject to additional restrictions. Additional restrictions apply to both the lower range value and the upper range value.

### Flow measuring ranges in SI units

| DN<br>[mm] | Liquids<br>[m³/h] | Gas/steam<br>[m³/h] |
|------------|-------------------|---------------------|
| 15         | 0.076 to 4.9      | 0.39 to 25          |
| 25         | 0.23 to 15        | 1.2 to 130          |
| 40         | 0.57 to 37        | 2.9 to 310          |
| 50         | 0.96 to 62        | 4.9 to 820          |
| 80         | 2.2 to 140        | 11 to 1800          |
| 100        | 3.7 to 240        | 19 to 3200          |
| 150        | 8.5 to 540        | 43 to 7300          |
| 200        | 15 to 950         | 75 to 13000         |
| 250        | 23 to 1500        | 120 to 20000        |
| 300        | 33 to 2100        | 170 to 28000        |

### Flow measuring ranges in US units

| DN<br>[in] | Liquids<br>[ft³/min] | Gas/steam<br>[ft³/min] |
|------------|----------------------|------------------------|
| ½          | 0.045 to 2.9         | 0.23 to 15             |
| 1          | 0.14 to 8.8          | 0.7 to 74              |
| 1½         | 0.34 to 22           | 1.7 to 180             |
| 2          | 0.56 to 36           | 2.9 to 480             |
| 3          | 1.3 to 81            | 6.4 to 1100            |
| 4          | 2.2 to 140           | 11 to 1900             |

| DN   | Liquids                | Gas/steam              |
|------|------------------------|------------------------|
| [in] | [ft <sup>3</sup> /min] | [ft <sup>3</sup> /min] |
| 6    | 5 to 320               | 25 to 4 300            |
| 8    | 8.7 to 560             | 44 to 7 500            |
| 10   | 14 to 880              | 70 to 12 000           |
| 12   | 19 to 1 300            | 99 to 17 000           |

### Flow velocity

A0033468

$D_i$  Measuring tube internal diameter (corresponds to dimension K → 61)

$v$  Velocity in measuring tube

$Q$  Flow

 The internal diameter of measuring tube  $D_i$  is denoted in the dimensions as dimension K → 61.

Calculation of flow velocity:

$$v \text{ [m/s]} = \frac{4 \cdot Q \text{ [m}^3\text{/h]}}{\pi \cdot D_i \text{ [m]}^2} \cdot \frac{1}{3600 \text{ [s/h]}}$$

$$v \text{ [ft/s]} = \frac{4 \cdot Q \text{ [ft}^3\text{/min]}}{\pi \cdot D_i \text{ [ft]}^2} \cdot \frac{1}{60 \text{ [s/min]}}$$

A0034301

### Lower range value

 The Applicator is available for calculation purposes.

#### Reynolds number

A restriction applies to the lower range value due to the turbulent flow profile, which only occurs with Reynolds numbers greater than 5 000. The Reynolds number is dimensionless and indicates the ratio of the inertia force of a fluid to its viscous force when flowing and is used as a characteristic variable for pipe flows. In the case of pipe flows with Reynolds numbers less than 5 000, periodic vortices are no longer generated and flow rate measurement is no longer possible.

The Reynolds number is calculated as follows:

$$Re = \frac{4 \cdot Q \text{ [m}^3\text{/s]} \cdot \rho \text{ [kg/m}^3\text{]}}{\pi \cdot D_i \text{ [m]} \cdot \mu \text{ [Pa} \cdot \text{s]}}$$

$$Re = \frac{4 \cdot Q \text{ [ft}^3\text{/s]} \cdot \rho \text{ [lbm/ft}^3\text{]}}{\pi \cdot D_i \text{ [ft]} \cdot \mu \text{ [lbf} \cdot \text{s/ft}^2\text{]}}$$

A0034291

|        |   |
|--------|---|
| $Re$   | Reynolds number   |
| $Q$    | Flow  |
| $D_i$  | Internal diameter of measuring tube (corresponds to dimension $K \rightarrow$ 61) |
| $\mu$  | Dynamic viscosity   |
| $\rho$ | Density   |

The Reynolds number 5 000, together with the density and viscosity of the fluid and the nominal diameter, is used to calculate the corresponding flow rate.

$$Q_{Re=5000} [\text{m}^3/\text{h}] = \frac{5000 \cdot \pi \cdot D_i [\text{m}] \cdot \mu [\text{Pa} \cdot \text{s}]}{4 \cdot \rho [\text{kg}/\text{m}^3]} \cdot 3600 [\text{s}/\text{h}]$$

$$Q_{Re=5000} [\text{ft}^3/\text{h}] = \frac{5000 \cdot \pi \cdot D_i [\text{ft}] \cdot \mu [\text{lbf} \cdot \text{s}/\text{ft}^2]}{4 \cdot \rho [\text{lbm}/\text{ft}^3]} \cdot 60 [\text{s}/\text{min}]$$

A0034302

|               |   |
|---------------|---|
| $Q_{Re=5000}$ | Flow rate at Reynolds number 5000   |
| $D_i$         | Internal diameter of measuring tube (corresponds to dimension $K \rightarrow$ 61) |
| $\mu$         | Dynamic viscosity   |
| $\rho$        | Density   |

#### Minimum measurable flow velocity based on signal amplitude

The measuring signal must have a certain minimum signal amplitude so that the signals can be evaluated without any errors. Using the nominal diameter, the corresponding flow can also be derived from this amplitude.

The minimum signal amplitude depends on the setting for the sensitivity of the DSC sensor, the steam quality **x** and the force of the vibrations present **a**.

The value **mf** corresponds to the lowest measurable flow velocity without vibration (no wet steam) for a density of 1 kg/m<sup>3</sup> (0.0624 lb/ft<sup>3</sup>).

The value **mf** can be set in the range of 20 to 6 m/s (65.6 to 19.7 ft/s) (factory setting 11 m/s (36.1 ft/s)) with the **Sensitivity** parameter (value range 1 to 9, factory setting 5).

The lowest flow velocity that can be measured on account of the signal amplitude **v<sub>AmpMin</sub>** is derived from the **Sensitivity** parameter and steam quality **x** or from the force of vibrations present **a**.

$$v_{\text{AmpMin}} [\text{m}/\text{s}] = \max \left\{ \begin{array}{l} \frac{\text{mf} [\text{m}/\text{s}]}{x^2 \cdot \sqrt{\frac{\rho [\text{kg}/\text{m}^3]}{1 [\text{kg}/\text{m}^3]}}} \\ \frac{\sqrt{50 [\text{m}] \cdot a [\text{m}/\text{s}^2]}}{x^2} \end{array} \right.$$

$$v_{\text{AmpMin}} [\text{ft}/\text{s}] = \max \left\{ \begin{array}{l} \frac{\text{mf} [\text{ft}/\text{s}]}{x^2 \cdot \sqrt{\frac{\rho [\text{lbm}/\text{ft}^3]}{0.0624 [\text{lbm}/\text{ft}^3]}}} \\ \frac{\sqrt{164 [\text{ft}] \cdot a [\text{ft}/\text{s}^2]}}{x^2} \end{array} \right.$$

A0034303

|                     |  |
|---------------------|--|
| $v_{\text{AmpMin}}$ | Minimum measurable flow velocity based on signal amplitude |
| $mf$                | Sensitivity  |
| $x$                 | Steam quality  |
| $\rho$              | Density  |

#### Minimum measurable flow rate based on signal amplitude

$$Q_{\text{AmpMin}} [\text{m}^3/\text{h}] = \frac{v_{\text{AmpMin}} [\text{m/s}] \cdot \pi \cdot (D_i [\text{m}])^2}{4} \cdot 3600 [\text{s/h}]$$

$$Q_{\text{AmpMin}} [\text{ft}^3/\text{min}] = \frac{v_{\text{AmpMin}} [\text{ft/s}] \cdot \pi \cdot (D_i [\text{ft}])^2}{4} \cdot 60 [\text{s/min}]$$

A0034304

|                     |   |
|---------------------|---|
| $Q_{\text{AmpMin}}$ | Minimum measurable flow rate based on signal amplitude                |
| $v_{\text{AmpMin}}$ | Minimum measurable flow velocity based on signal amplitude            |
| $D_i$               | Internal diameter of measuring tube (corresponds to dimension K → 61) |
| $\rho$              | Density   |

#### Effective lower range value

The effective lower range value  $Q_{\text{min\_eff}}$  is determined using the largest of the three values  $Q_{\text{min}}$ ,  $Q_{\text{Re}} = 5000$  and  $Q_{\text{AmpMin}}$ .

$$Q_{\text{min\_eff}} [\text{m}^3/\text{h}] = \max \begin{cases} Q_{\text{min}} [\text{m}^3/\text{h}] \\ Q_{\text{Re} = 5000} [\text{m}^3/\text{h}] \\ Q_{\text{AmpMin}} [\text{m}^3/\text{h}] \end{cases}$$

$$Q_{\text{min\_eff}} [\text{ft}^3/\text{min}] = \max \begin{cases} Q_{\text{min}} [\text{ft}^3/\text{min}] \\ Q_{\text{Re} = 5000} [\text{ft}^3/\text{min}] \\ Q_{\text{AmpMin}} [\text{ft}^3/\text{min}] \end{cases}$$

A0034313

|                        |  |
|------------------------|--|
| $Q_{\text{min\_eff}}$  | Effective lower range value                            |
| $Q_{\text{min}}$       | Minimum measurable flow rate                           |
| $Q_{\text{Re} = 5000}$ | Flow rate at Reynolds number 5000                      |
| $Q_{\text{AmpMin}}$    | Minimum measurable flow rate based on signal amplitude |

#### Upper range value

The Applicator is available for calculation purposes.

#### Maximum measurable flow rate based on signal amplitude

The measuring signal amplitude must be below a certain limit value to ensure that the signals can be evaluated without error. This results in a maximum permitted flow rate  $Q_{\text{AmpMax}}$ .

$$Q_{AmpMax} [m^3/h] = \frac{URV [m/s] \cdot \pi \cdot D_i [m]^2}{4 \cdot \sqrt{\frac{\rho [kg/m^3]}{1 [kg/m^3]}}} \cdot 3600 [s/h]$$

$$Q_{AmpMax} [ft^3/min] = \frac{URV [ft/s] \cdot \pi \cdot D_i [ft]^2}{4 \cdot \sqrt{\frac{\rho [lbm/ft^3]}{0.0624 [lbm/ft^3]}}} \cdot 60 [s/min]$$

A0034316

$Q_{AmpMax}$  Maximum measurable flow rate based on signal amplitude

$D_i$  Internal diameter of measuring tube (corresponds to dimension K → 61)

$\rho$  Density

URV Limit value for determining the maximum flow rate:

- DN 15 to 40: URV = 350
- DN 50 to 300: URV = 600
- NPS ½ to 1½: URV = 1148
- NPS 2 to 12: URV = 1969

Restricted upper range value is dependent on Mach number

For gas applications, an additional restriction applies to the upper range value with regard to the Mach number in the measuring instrument, which must be less than 0.3. The Mach number Ma describes the ratio of the flow velocity v to the speed of sound c in the fluid.

$$Ma = \frac{v [m/s]}{c [m/s]}$$

$$Ma = \frac{v [ft/s]}{c [ft/s]}$$

A0034321

Ma Mach number

v Flow velocity

c Speed of sound

The corresponding flow rate can be derived using the nominal diameter.

$$Q_{MaMax = 0.3} [m^3/h] = \frac{0.3 \cdot c [m/s] \cdot \pi \cdot D_i [m]^2}{4} \cdot 3600 [s/h]$$

$$Q_{MaMax = 0.3} [ft^3/min] = \frac{0.3 \cdot c [ft/s] \cdot \pi \cdot D_i [ft]^2}{4} \cdot 60 [s/min]$$

A0034337

$Q_{MaMax = 0.3}$  Restricted upper range value is dependent on Mach number

c Speed of sound

$D_i$  Internal diameter of measuring tube (corresponds to dimension K → 61)

$\rho$  Density

Effective upper range value

The effective upper range value  $Q_{\max\_eff}$  is determined using the smallest of the three values  $Q_{\max}$ ,  $Q_{AmpMax}$  and  $Q_{MaMax = 0.3}$ .

$$Q_{\max\_eff} \text{ [m}^3\text{/h]} = \min \begin{cases} Q_{\max} \text{ [m}^3\text{/h]} \\ Q_{AmpMax} \text{ [m}^3\text{/h]} \\ Q_{MaMax = 0.3} \text{ [m}^3\text{/h]} \end{cases}$$
$$Q_{\max\_eff} \text{ [ft}^3\text{/min]} = \min \begin{cases} Q_{\max} \text{ [ft}^3\text{/min]} \\ Q_{AmpMax} \text{ [ft}^3\text{/min]} \\ Q_{MaMax = 0.3} \text{ [ft}^3\text{/min]} \end{cases}$$

A0034338

- $Q_{\max\_eff}$

Effective upper range value
- $Q_{\max}$

Maximum measurable flow rate
- $Q_{AmpMax}$

Maximum measurable flow rate based on signal amplitude
- $Q_{MaMax = 0.3}$

Restricted upper range value is dependent on Mach number

For liquids, the occurrence of cavitation may also restrict the upper range value.

Operable flow range

Typically up to 49: 1  
The value may vary depending on the operating conditions (ratio between the effective lower range value and upper range value).

$$\frac{Q_{\max\_eff}}{Q_{\min\_eff}}$$

A0058819

- $Q_{\max\_eff}$

Effective upper range value
- $Q_{\min\_eff}$

Effective lower range value

| Resolution               | 1 µA  |
| Voltage drop             | Typically: 2.2 to 3 V for 3.6 to 22 mA  |
| Maximum voltage          | ≤ 35 V  |
| Possible input variables | <div><div>■</div>Pressure</div> <div><div>■</div>Temperature</div> <div><div>■</div>Density</div> |

### External measured values

To increase the measurement accuracy of certain measured variables or to calculate the corrected volume flow, the automation system can continuously write different measured values to the measuring instrument:

- Operating pressure to increase measurement accuracy (Endress+Hauser recommends the use of a pressure measuring instrument for absolute pressure, e.g. Cerabar M or Cerabar S)
  - Medium temperature to increase measurement accuracy (e.g. iTEMP)
  - Reference density for calculating the corrected volume flow
-  ■ Various pressure measuring devices can be ordered as accessories from Endress+Hauser.
- If using pressure measuring devices, pay attention to outlet runs when installing external devices →  51.

If the measuring instrument does not have pressure or temperature compensation<sup>2)</sup>, it is recommended that external pressure measured values be read in so that the following measured variables can be calculated:

- Energy flow
- Mass flow
- Corrected volume flow

If the device does not have temperature compensation, it is recommended that external pressure measurement values be read in so that the following measured variables can be calculated:

- Energy flow
- Mass flow
- Corrected volume flow

### Integrated pressure and temperature measurement

The measuring device can also directly record external variables for density and energy compensation.

This product version offers the following benefits:

- Measurement of pressure, temperature and flow in a true 2-wire version
- Recording of pressure and temperature at the same point, thus ensuring maximum accuracy of density and energy compensation.
- Continuous monitoring of pressure and temperature, thus enabling complete integration in Heartbeat.
- Easy testing of pressure measurement accuracy:
  - Application of pressure by pressure calibration unit, followed by input into measuring device
  - Automatic error correction performed by device in the event of a deviation
- Availability of calculated line pressure.

### Current input

The measured values are written from the automation system to the measuring device via the current input →  17.

### HART protocol

The measured values are written from the automation system to the measuring device via the HART protocol. The pressure transmitter must support the following protocol-specific functions:

- HART protocol
- Burst mode

### Digital communication

The measured values can be written from the automation system to the measuring via:

- FOUNDATION Fieldbus
- PROFIBUS PA
- Modbus TCP over Ethernet-APL
- PROFINET over Ethernet-APL

2) Order code for "Sensor version", DSC sensor; measuring tube" option DA, DB

## Output

### Output signal

#### Current output

|                               |   |
|-------------------------------|---|
| Current output 1              | 4-20 mA HART (passive)  |
| Current output 2              | 4-20 mA (passive)   |
| Resolution                    | < 1 µA  |
| Damping                       | Configurable: 0.0 to 999.9 s  |
| Assignable measured variables | <ul style="list-style-type: none"> <li>■ Volume flow</li> <li>■ Corrected volume flow</li> <li>■ Mass flow</li> <li>■ Flow velocity</li> <li>■ Temperature</li> <li>■ Pressure</li> <li>■ Calculated saturated steam pressure</li> <li>■ Steam quality</li> <li>■ Total mass flow</li> <li>■ Energy flow</li> <li>■ Heat flow difference</li> </ul> |

## Signal on alarm

Depending on the interface, failure information is displayed as follows:

### HART current output

|                           |  |
|---------------------------|--|
| <b>Device diagnostics</b> | Device condition can be read out via HART Command 48 |
|---------------------------|--|

### Current output

| Current output 4-20 mA |  |
|------------------------|--|
| <b>Failure mode</b>    | Configurable: <ul style="list-style-type: none"> <li>■ 4 to 20 mA in accordance with NAMUR recommendation NE 43</li> <li>■ 4 to 20 mA in accordance with US</li> <li>■ Min. value: 3.59 mA</li> <li>■ Max. value: 22.5 mA</li> <li>■ Definable value between: 3.59 to 22.5 mA</li> <li>■ Actual value</li> <li>■ Last valid value</li> </ul> |

### Pulse/frequency/switch output

| Pulse output        |  |
|---------------------|--|
| <b>Failure mode</b> | No pulses  |
| Frequency output    |  |
| <b>Failure mode</b> | Configurable: <ul style="list-style-type: none"> <li>■ Actual value</li> <li>■ 0 Hz</li> <li>■ Definable value between: 0 to 1 250 Hz</li> </ul> |
| Switch output       |  |
| <b>Failure mode</b> | Configurable: <ul style="list-style-type: none"> <li>■ Current status</li> <li>■ Open</li> <li>■ Closed</li> </ul>                               |

### FOUNDATION Fieldbus

|   |                                       |
|---|---------------------------------------|
| <b>Status and alarm messages</b>                            | Diagnostics in accordance with FF-891 |
| <b>Failure current FDE (Fault Disconnection Electronic)</b> | 0 mA                                  |

### PROFIBUS PA

|   |   |
|---|---|
| <b>Status and alarm messages</b>                            | Diagnostics in accordance with PROFIBUS PA Profile 3.02 |
| <b>Failure current FDE (Fault Disconnection Electronic)</b> | 0 mA  |

**PROFINET over Ethernet-APL**

|                           |   |
|---------------------------|---|
| <b>Device diagnostics</b> | Diagnostics according to PROFINET PA Profile 4.02 |
|---------------------------|---|

**Modbus TCP over Ethernet-APL/SPE**

|                     |   |
|---------------------|---|
| <b>Failure mode</b> | Choose from: <ul style="list-style-type: none"> <li>■ NaN value instead of current value</li> <li>■ Last valid value</li> </ul> |
|---------------------|---|

**Local display**

|                           |   |
|---------------------------|---|
| <b>Plain text display</b> | With information on cause and remedial measures   |
| <b>Backlight</b>          | Additionally for device version with SD03 local display: red lighting indicates a device error. |

Status signal as per NAMUR recommendation NE 107

**Interface/protocol**

- Via digital communication
  - HART protocol
  - FOUNDATION Fieldbus
  - PROFIBUS PA
  - Modbus TCP over Ethernet-APL
  - PROFINET over Ethernet-APL
- Via service interface  
Endress+Hauser Common Data Interface (CDI)
- Plain text display  
With information on cause and remedial actions

Additional information on remote operation → 91

**LEDs**

LEDs are only available for PROFINET over Ethernet-APL and Modbus TCP over Ethernet-APL.

|                           |  |
|---------------------------|--|
| <b>Status information</b> | Status indicated by various LEDs<br>The following information is displayed depending on the device version: <ul style="list-style-type: none"> <li>■ Supply voltage active</li> <li>■ Data transmission active</li> <li>■ Network available</li> <li>■ Connection established</li> <li>■ Diagnostic status <sup>1)</sup></li> <li>■ PROFINET blinking feature <sup>2)</sup></li> </ul> |
|---------------------------|--|

1) Only available for Modbus over Ethernet-APL

2) Only available for PROFINET over Ethernet-APL

**Load**

Load for current output: 0 to 500 Ω, depending on the external supply voltage of the power supply unit

**Calculation of the maximum load**

Depending on the supply voltage of the power supply unit ( $U_S$ ), the maximum load ( $R_B$ ) including line resistance must be observed to ensure adequate terminal voltage at the device. In doing so, observe the minimum terminal voltage

- $R_B \leq (U_S - U_{\text{term. min}}): 0.022 \text{ A}$
- $R_B \leq 500 \Omega$

A0033472

2 Load for a compact version without local operation

1 Operating range

1.1 For order code for "Output", option A "4-20 mA HART"/option B "4-20 mA HART, pulse/frequency/switch output" with Ex i and option C "4-20 mA HART + 4-20 mA analog"

1.2 For order code for "Output", option A "4-20 mA HART"/option B "4-20 mA HART, pulse/frequency/switch output" for non-hazardous area and Ex d

### Sample calculation

Supply voltage of power supply unit:

- $U_S = 19 \text{ V}$
- $U_{\text{term. min}} = 12 \text{ V (measuring device)} + 1 \text{ V (local operation without lighting)} = 13 \text{ V}$

Maximum load:  $R_B \leq (19 \text{ V} - 13 \text{ V}): 0.022 \text{ A} = 273 \Omega$

 The minimum terminal voltage ( $U_{\text{kl min}}$ ) increases if local operation is used..

### Ex connection data

The devices are certified for use in hazardous areas and the relevant safety instructions are provided in the separate "Safety Instructions" (XA) document. Reference is made to this document on the nameplate.

### Low flow cut off

The switch points for low flow cut off are preset and can be configured.

### Galvanic isolation

All inputs and outputs are galvanically isolated from one another.

### Protocol-specific data

- 1) Output 1 must always be used; output 2 is optional.
- 2) The integrated overvoltage protection is not used with option D: Terminals 5 and 6 (current input) are not protected against overvoltage.
- 3) With integrated reverse polarity protection

### Connecting cable for remote version

#### *Transmitter and sensor connection housing*

In the case of the remote version, the sensor and transmitter are mounted separately from on another and connected by a connecting cable. Connection is performed via the sensor connection housing and the transmitter housing.

How the connecting cable is connected in the transmitter housing depends on the measuring instrument approval and the version of the connecting cable used.

In the following versions, only terminals can be used for connection in the transmitter housing:

- Order code for "Electrical connection", option B, C, D, 6
- Certain approvals: Ex nA, Ex ec, Ex tb and Division 1
- Use of reinforced connecting cable
- Order code for "Sensor version; DSC sensor; measuring tube", option DA, DB

In the following versions, an M12 device connector is used for connection in the transmitter housing:

- All other approvals
- Use of connecting cable (standard)

Terminals are always used to connect the connecting cable in the sensor connection housing (tightening torques for screws for cable strain relief: 1.2 to 1.7 Nm).

#### *Connection via terminals*

A0041608

1. Loosen the securing clamp of the transmitter housing.
2. Turn the transmitter housing clockwise by approx. 20°.
3. **NOTICE**  
**The connection board of the wall housing is connected to the electronics board of the transmitter via a signal cable!**  
 ► Pay attention to the signal cable when lifting the transmitter housing!  
 Lift the transmitter housing, plug the signal cable out of the connection board of the wall holder and remove the transmitter housing.
4. Release the cable gland and insert the connecting cable (use the shorter stripped end of the connecting cable).
5. Wire the connecting cable → 3, 31 → 4, 31.
6. Reverse the removal procedure to reassemble the transmitter housing.
7. Firmly tighten the cable gland.

*Connecting cable (standard, reinforced)*

- Phoenix, part no. 1413934 SACC-FS-4QO SH PBPA SCO

**Supply voltage****Transmitter**

An external power supply is required for each output.

For installation in systems where the power unit is tested to ensure it meets safety requirements (e.g. SELV/PELV Class 2 limited energy). Only one wire is permitted per terminal.

*Supply voltage for a compact version without a local display<sup>1)</sup>*

| Order code for "Output; input"   | Minimum Terminal voltage <sup>2)</sup> | Maximum Terminal voltage |
|--|--|--------------------------|
| Option <b>A</b> : 4-20 mA HART   | ≥ DC 12 V                              | DC 35 V                  |
| Option <b>B</b> : 4-20 mA HART, pulse/frequency/switch output                                      | ≥ DC 12 V                              | DC 35 V                  |
| Option <b>C</b> : 4-20 mA HART + 4-20 mA analog  | ≥ DC 12 V                              | DC 30 V                  |
| Option <b>D</b> : 4-20 mA HART, pulse/frequency/switch output, 4-20 mA current input <sup>3)</sup> | ≥ DC 12 V                              | DC 35 V                  |
| Option <b>E</b> : FOUNDATION Fieldbus, pulse/frequency/switch output                               | ≥ DC 9 V                               | DC 32 V                  |
| Option <b>G</b> : PROFIBUS PA, pulse/frequency/switch output                                       | ≥ DC 9 V                               | DC 32 V                  |
| Option <b>S</b> : PROFINET over Ethernet-APL/SPE, 10 Mbit/s  | ≥ DC 9 V                               | DC 30 V                  |
| Option <b>T</b> : Modbus TCP over Ethernet-APL/SPE, 10 Mbit/s                                      | ≥ DC 9 V                               | DC 30 V                  |

- 1) In event of external supply voltage of the power supply unit with load, the PROFIBUS DP/PA coupler or FOUNDATION Fieldbus power conditioner
- 2) Increase of minimum terminal voltage with local operation: See the table below.
- 3) Voltage drop 2.2 to 3 V for 3.59 to 22 mA

*Increase of minimum terminal voltage with local operation*

| Order code for "Display; operation"  | Increase in minimum Terminal voltage |
|--|--------------------------------------|
| Option C:<br>Local operation SD02  | + DC 1 V                             |
| Option E:<br>Local operation SD03 with lighting<br>(backlighting not used) | + DC 1 V                             |
| Option E:<br>Local operation SD03 with lighting<br>(backlighting used)     | + DC 3 V                             |

| Order code for "Sensor version; DSC sensor; measuring tube"                              | Increase in minimum Terminal voltage |
|--|--------------------------------------|
| Option DA:<br>Mass steam; 316L; 316L (integrated pressure/temperature measurement)       | + DC 1 V                             |
| Option DB:<br>Mass gas/liquid; 316L; 316L (integrated pressure/temperature measurement), | + DC 1 V                             |

| Option T: Modbus TCP over Ethernet-APL/<br>SPE, 10 Mbit/s                           | Operation with output 1: Ex: 833 mW<br>Non-Ex: 1.5 W  |

-  For information on the Ex connection values →  24

**Current consumption****Current output**

For every 4-20 mA current output or current output: 3.6 to 22.5 mA

-  If the option **Defined value** is selected in the **Failure mode** parameter : 3.59 to 22.5 mA

**Current input**

3.59 to 22.5 mA

Internal current limiting: max. 26 mA

**FOUNDATION Fieldbus**

15 mA

**PROFIBUS PA**

15 mA

**PROFINET over Ethernet-APL**

20 to 55.56 mA

**Modbus TCP over Ethernet-APL**

20 to 55.56 mA

---

**Power supply failure**

- Totalizers stop at the last value measured.
- Depending on the device version, the configuration is retained in the device memory or in the plug-in memory (HistoROM DAT).
- Error messages (incl. total operated hours) are stored.

**Electrical connection****Transmitter connection**

A0033480

1 Cable entries for inputs/outputs

**Remote version connection***Connecting cable*

A0033481

 5 *Connecting cable connection*

1 Wall holder with connection compartment (transmitter)

2 Connecting cable

3 Sensor connection housing

 How the connecting cable is connected in the transmitter housing depends on the measuring instrument approval and the version of the connecting cable used.

In the following versions, only terminals can be used for connection in the transmitter housing:

- Order code for "Electrical connection", option B, C, D, 6
- Certain approvals: Ex nA, Ex ec, Ex tb and Division 1
- Use of reinforced connecting cable
- Order code for "Sensor version; DSC sensor; measuring tube", option DA, DB

In the following versions, an M12 device connector is used for connection in the transmitter housing:

- All other approvals
- Use of connecting cable (standard)

Terminals are always used to connect the connecting cable in the sensor connection housing (tightening torques for screws for cable strain relief: 1.2 to 1.7 Nm).

## Connection examples

### Current output 4 to 20 mA (without HART)

A0055852

6 Connection example for 4 to 20 mA current output (passive)

- 1 Automation system with current input (e.g. PLC)
- 2 Power supply
- 3 Optional additional display unit: Observe maximum load
- 4 Transmitter with current output (passive)

### Current input 4 to 20 mA

A0055853

7 Connection example for 4 to 20 mA current input

- 1 Power supply
- 2 External measuring instrument with 4 to 20 mA passive current output. e.g. pressure or temperature
- 3 Transmitter with 4 to 20 mA current input

### Pulse output/frequency output/switch output

A0055855

8 Connection example for pulse output/frequency output/switch output (passive)

- 1 Automation system with pulse input/frequency input/switch input (e.g. PLC)
- 2 Power supply
- 3 Transmitter with pulse output/frequency output/switch output (passive)

Current output 4 to 20 mA HART

A0055861

 9 Connection example for 4 to 20 mA current output with HART (passive)

- 1 Automation system with 4 to 20 mA current input with HART (e.g. PLC)  
2 Power supply  
3 Optional display unit: Note maximum load  
4 Transmitter with 4 to 20 mA current output with HART (passive)  
5 Ground cable shield at one end. For installations in compliance with NAMUR NE 89, grounding of the cable shield on both sides is required.

## PROFIBUS PA

See <https://www.profibus.com> "PROFIBUS Installation Guidelines".

## FOUNDATION Fieldbus

A0029769

 10 Connection example for FOUNDATION Fieldbus

- |   |  |
|---|--|
| 1 | Automation system (e.g. PLC)   |
| 2 | Power Conditioner (FOUNDATION Fieldbus)  |
| 3 | Cable shield provided at one end. The cable shield must be grounded at both ends to comply with EMC requirements; observe cable specifications |
| 4 | T-box  |
| 5 | Measuring instrument   |
| 6 | Local grounding  |
| 7 | Bus terminator   |
| 8 | Potential equalization conductor   |

## Ethernet-APL

See <https://www.profibus.com> Ethernet-APL White Paper "

**Potential equalization****Requirements**

For potential equalization:

- Pay attention to in-house grounding concepts
- Take account of operating conditions like the pipe material and grounding
- Connect the medium, sensor and transmitter to the same electric potential.
- Use a ground cable with a minimum cross-section of 6 mm<sup>2</sup> (10 AWG) and a cable lug for potential equalization connections.

**Terminals**

- For device version without integrated overvoltage protection: plug-in spring terminals for wire cross-sections 0.5 to 2.5 mm<sup>2</sup> (20 to 14 AWG)
- For device version with integrated overvoltage protection: screw terminals for wire cross-sections 0.2 to 2.5 mm<sup>2</sup> (24 to 14 AWG)

**Cable entries**

The type of cable entry available depends on the specific device version.

**Cable gland (not for Ex d)**

M20 × 1.5

**Thread for cable entry**

- NPT ½"
- G ½"
- M20 × 1.5

**Cable specification****Permitted temperature range**

- The installation guidelines that apply in the country of installation must be observed.
- The cables must be suitable for the minimum and maximum temperatures to be expected.

**Signal cable**

*4 to 20 mA current output (without HART)*

Standard installation cable is sufficient.

*Pulse/frequency/switch output*

Standard installation cable is sufficient.

*Current output 4 to 20 mA HART*

Shielded twisted-pair cable.

See <https://www.fieldcommgroup.org> "HART PROTOCOL SPECIFICATIONS".

*PROFIBUS PA*

Shielded twisted-pair cable. Cable type A is recommended.

See <https://www.profibus.com> "PROFIBUS Installation Guidelines".

*Ethernet-APL*

Shielded twisted-pair cable. Cable type A is recommended.

See <https://www.profibus.com> Ethernet-APL White Paper "

*FOUNDATION Fieldbus*

Twisted, shielded two-wire cable.

For further information on planning and installing FOUNDATION Fieldbus networks see:

- Operating Instructions for "FOUNDATION Fieldbus Overview" (BA00013S)
- FOUNDATION Fieldbus Guideline
- IEC 61158-2 (MBP)

**Connecting cable for remote version***Connecting cable (standard)*

|   |  |
|---|--|
| <b>Standard cable</b>                   | 2 × 2 × 0.5 mm <sup>2</sup> (22 AWG) PVC cable with common shield (2 pairs, pair-stranded) <sup>1)</sup>                       |
| <b>Flame resistance</b>                 | According to DIN EN 60332-1-2  |
| <b>Oil resistance</b>                   | According to DIN EN 60811-2-1  |
| <b>Shielding</b>                        | Galvanized copper-braid, opt. density approx. 85 %   |
| <b>Cable length</b>                     | 5 m (15 ft), 10 m (30 ft), 20 m (60 ft), 30 m (90 ft)  |
| <b>Continuous operating temperature</b> | When mounted in a fixed position: -50 to +105 °C (-58 to +221 °F); when cable can move freely: -25 to +105 °C (-13 to +221 °F) |

- 1) UV radiation may cause damage to the outer jacket of the cable. Protect the cable from exposure to sun as much as possible.

*Connecting cable (armored)*

|   |  |
|---|--|
| <b>Cable, armored</b>                   | 2 × 2 × 0.34 mm <sup>2</sup> (22 AWG) PVC cable with common shield (2 pairs, pair-stranded) and additional steel-wire braided sheath <sup>1)</sup> |
| <b>Flame resistance</b>                 | According to DIN EN 60332-1-2  |
| <b>Oil resistance</b>                   | According to DIN EN 60811-2-1  |
| <b>Shielding</b>                        | Galvanized copper-braid, opt. density approx. 85%  |
| <b>Strain relief and reinforcement</b>  | Steel-wire braid, galvanized   |
| <b>Cable length</b>                     | 10 m (30 ft), 20 m (60 ft), 30 m (90 ft)   |
| <b>Continuous operating temperature</b> | When mounted in a fixed position: -50 to +105 °C (-58 to +221 °F); when cable can move freely: -25 to +105 °C (-13 to +221 °F)                     |

- 1) UV radiation may cause damage to the outer jacket of the cable. Protect the cable from exposure to sun as much as possible.

*Connecting cable (option "mass pressure-/temperature-compensated")*

Order code for "Sensor version; DSC sensor; measuring tube", option DA, DB

|   |  |
|---|--|
| <b>Standard cable</b>                   | [(3 × 2) + 1] × 0.34 mm <sup>2</sup> (22 AWG) PVC cable with common shield (3 pairs, pair-stranded) <sup>1)</sup>              |
| <b>Flame resistance</b>                 | According to DIN EN 60332-1-2  |
| <b>Oil resistance</b>                   | According to DIN EN 60811-2-1  |
| <b>Shielding</b>                        | Galvanized copper-braid, opt. density approx. 85%  |
| <b>Cable length</b>                     | 10 m (30 ft), 30 m (90 ft)   |
| <b>Continuous operating temperature</b> | When mounted in a fixed position: -50 to +105 °C (-58 to +221 °F); when cable can move freely: -25 to +105 °C (-13 to +221 °F) |

- 1) UV radiation may cause damage to the outer jacket of the cable. Protect the cable from exposure to sun as much as possible.

**Connecting cable (option "mass pressure-/temperature-compensated")**

Order code for "Sensor version; DSC sensor; measuring tube", option DA, DB

|                                  |  |
|----------------------------------|--|
| Standard cable                   | $[(3 \times 2) + 1] \times 0.34 \text{ mm}^2$ (22 AWG) PVC cable with common shield (3 pairs, pair-stranded) <sup>1)</sup>     |
| Flame resistance                 | According to DIN EN 60332-1-2  |
| Oil resistance                   | According to DIN EN 60811-2-1  |
| Shielding                        | Galvanized copper-braid, opt. density approx. 85%  |
| Cable length                     | 10 m (30 ft), 30 m (90 ft)   |
| Continuous operating temperature | When mounted in a fixed position: -50 to +105 °C (-58 to +221 °F); when cable can move freely: -25 to +105 °C (-13 to +221 °F) |

1) UV radiation may cause damage to the outer jacket of the cable. Protect the cable from exposure to sun as much as possible.

Overvoltage protection

The device can be ordered with integrated overvoltage protection:  
*Order code for "Accessory mounted", option NA "Overvoltage protection"*

|                                     |   |
|-------------------------------------|---|
| Input voltage range                 | Values correspond to supply voltage specifications →  33 <sup>1)</sup> |
| Resistance per channel              | $2 \cdot 0.5 \Omega$ max.   |
| DC sparkover voltage                | 400 to 700 V  |
| Trip surge voltage                  | < 800 V   |
| Capacitance at 1 MHz                | < 1.5 pF  |
| Nominal discharge current (8/20 µs) | 10 kA   |
| Temperature range                   | -40 to +85 °C (-40 to +185 °F)  |

1) The voltage is reduced by the amount of the internal resistance  $I_{\min} \cdot R_i$

-  Depending on the temperature class, restrictions apply to the ambient temperature for device versions with overvoltage protection .
-  For detailed information on the temperature tables, see the "Safety Instructions" (XA) for the device.

The use of an external overvoltage protection e.g. HAW 569 is recommended.

Performance characteristics

Reference operating conditions

- Error limits following ISO/DIN 11631
- +20 to +30 °C (+68 to +86 °F)
- 2 to 4 bar (29 to 58 psi)
- Calibration system traceable to national standards
- Calibration with the process connection corresponding to the particular standard

 To obtain measured errors, use the *Applicator* sizing tool →  102

Maximum measurement error

- 1) Sensor version "Mass (integrated pressure/temperature measurement)" is only available for measuring instruments in the HART, PROFINET over Ethernet-APL and Modbus TCP over Ethernet-APL communication modes.
- 2) The specific measured errors refer to the position of the measurement in the measuring tube and do not correspond to the pressure in the pipe connection line upstream or downstream from the measuring instrument. No measured error is specified for the measured error for the "pressure" measured variable that can be assigned to the outputs.

*Mass flow saturated steam*

- 1) Order code for "Calibration flow", option N "0.65% volume PremiumCal 5-point"

*Mass flow (user-specific liquids)*

To specify the system accuracy, Endress+Hauser requires information about the type of liquid and its operating temperature or information in table form about the dependency between the liquid density and the temperature.

*Example*

- Acetone is to be measured at fluid temperatures from +70 to +90 °C (+158 to +194 °F).
- For this purpose, the **Reference temperature** parameter (7703) (here 80 °C (176 °F)), **Reference density** parameter (7700) (here 720.00 kg/m<sup>3</sup>) and **Linear expansion coefficient** parameter (7621) (here 18.0298 × 10<sup>-4</sup> 1/°C) must be entered in the transmitter.
- The overall system uncertainty, which is less than 0.9 % for the example above, is comprised of the following measurement uncertainties: uncertainty of volume flow measurement, uncertainty of temperature measurement, uncertainty of the density-temperature correlation used (including the resulting uncertainty of density).

*Mass flow (other media)*

Depends on the selected fluid and the pressure value, which is specified in the parameters. Individual error analysis must be performed.

**Diameter mismatch correction**

The measuring device is calibrated according to the ordered process connection. This calibration takes account of the edge at the transition from the mating pipe to the process connection. If the mating pipe used deviates from the ordered process connection, a diameter mismatch correction can compensate for the effects. The difference between the internal diameter of the ordered process connection and the internal diameter of the mating pipe used must be taken into consideration.

- 3) Single gas, gas mixture, air: NEL40; natural gas: ISO 12213-2 contains AGA8-DC92, AGA NX-19, ISO 12213-3 contains SGERG-88 and AGA8 Gross Method 1
- 4) The measuring instrument is calibrated with water and has been verified under pressure on gas calibration rigs.

The measuring device can correct shifts in the calibration factor which are caused, for example, by a diameter mismatch between the device flange (e.g. ASME B16.5/Sch. 80, DN 50 (2")) and the mating pipe (e.g. ASME B16.5/Sch. 40, DN 50 (2")). Only apply diameter mismatch correction within the following limit values (listed below) for which test measurements have also been performed.

**Flange connection:**

- DN 15 (½"): ±20 % of the internal diameter
- DN 25 (1"): ±15 % of the internal diameter
- DN 40 (1½"): ±12 % of the internal diameter
- DN ≥ 50 (2"): ±10 % of the internal diameter

If the standard internal diameter of the ordered process connection differs from the internal diameter of the mating pipe, an additional measuring uncertainty of approx. 2 % o.r. must be expected.

**Example**

Influence of the diameter mismatch without using the correction function:

- Mating pipe DN 100 (4"), Schedule 80
- Device flange DN 100 (4"), Schedule 40
- This installation position results in a diameter mismatch of 5 mm (0.2 in). If the correction function is not used, an additional measuring uncertainty of approx. 2 % o.r. must be expected.
- If the basic conditions are met and the feature is enabled, the additional measuring uncertainty is 1 % o.r.

For detailed information on the parameters for diameter mismatch correction, see the Operating Instructions → 103

**Accuracy of outputs**

The outputs have the following base accuracy specifications.

*Current output*

|          |        |
|----------|--------|
| Accuracy | ±10 µA |
|----------|--------|

*Pulse/frequency output*

o.r. = of reading

|          |                    |
|----------|--------------------|
| Accuracy | Max. ±100 ppm o.r. |
|----------|--------------------|

**Repeatability**

o.r. = of reading

$$r = \left\{ \frac{100 \cdot D_i^3}{V} \right\}^{1/2} \% \text{ o.r.}$$

A0042121-EN

A0042123-EN

11 Repeatability = 0.1 % o.r. with a measured volume  $[m^3]$  of  $V = 10\,000 \cdot D_i^3$

The repeatability can be improved if the measured volume is increased. Repeatability is not a device characteristic but a statistical variable that is dependent on the boundary conditions indicated.

#### Response time

If all the configurable functions for filter times (flow damping, display damping, current output time constant, frequency output time constant, status output time constant) are set to 0, in the event of vortex frequencies of 10 Hz and higher a response time of  $\max(T_v, 100 \text{ ms})$  can be expected.

In the event of measuring frequencies  $< 10 \text{ Hz}$ , the response time is  $> 100 \text{ ms}$  and can be up to 10 s.  $T_v$  is the average vortex period duration of the flowing fluid.

#### Relative humidity

The device is suitable for use in outdoor and indoor areas with a relative humidity of 5 to 95%.

#### Operating height

According to EN 61010-1

- $\leq 2\,000 \text{ m}$  (6 562 ft)
- $> 2\,000 \text{ m}$  (6 562 ft) with additional overvoltage protection (e.g. Endress+Hauser HAW Series)

#### Influence of ambient temperature

##### Current output

o.r. = of reading

Additional error, in relation to the span of 16 mA:

|  |             |
|--|-------------|
| Temperature coefficient at zero point (4 mA) | 0.02 %/10 K |
| Temperature coefficient with span (20 mA)    | 0.05 %/10 K |

##### Pulse/frequency output

o.r. = of reading

|                         |                                 |
|-------------------------|---------------------------------|
| Temperature coefficient | Max. $\pm 100 \text{ ppm o.r.}$ |
|-------------------------|---------------------------------|

# Installation

## Mounting location

- 1 Installation suitable for gases and steam; the measuring device must be installed upside-down in a horizontal pipe if the order code for "Application package", option ES "Wet steam detection" or EU "Wet steam measurement" is used
- 2 Installation not suitable for liquids

## Orientation

The direction of the arrow on the sensor nameplate helps you to install the sensor according to the flow direction (direction of medium flow through the piping).

Vortex meters require a fully developed flow profile as a prerequisite for correct volume flow measurement. Therefore, please note the following:

| Orientation |   |                                 | Recommendation   |                |
|-------------|---|---------------------------------|------------------|----------------|
|             |   |                                 | Compact version  | Remote version |
| A           | Vertical orientation (liquids)              | <p>A0015591</p>                 | ✓✓ <sup>1)</sup> | ✓✓             |

| <b>D</b>    | Horizontal orientation, transmitter head at side | <br>A0015592 | ✓✓ <sup>3)</sup>    | ✓✓             |

- 1) In the case of liquids, there should be upward flow in vertical pipes to avoid partial pipe filling (Fig. A). Disruption in flow measurement!
- 2) In the case of hot media (e.g. steam or medium temperature (TM)  $\geq 200$  °C (392 °F)): orientation C or D
- 3) In the case of very cold media (e.g. liquid nitrogen): orientation B or D
- 4) For "Wet steam detection/measurement" option: orientation C

 For order code for "Sensor version; DSC sensor; measuring tube", option DA "Mass steam" and DB "Mass gas/liquid", the following applies:

- Only available for measuring instruments with the following communication protocols:
  - HART
  - PROFINET over Ethernet-APL
  - Modbus TCP over Ethernet-APL
- Oil-free or grease-free cleaning is not possible.

#### Pressure measuring cell

| Steam pressure measurement  |   |   | Option DA |
|-----------------------------|---|---|-----------|
| <b>E</b>                    | <ul style="list-style-type: none"> <li>▪ With the transmitter installed at the bottom or at the side</li> <li>▪ Protection against rising heat</li> </ul>                   | <br>A0034057 | ✓✓        |

- 1) Note max. permitted ambient temperature of transmitter →  53.

### Minimum spacing and cable length

Order code for "Sensor version", option "Mass" DA, DB

**i** For order code for "Sensor version; DSC sensor; measuring tube", option DA "Mass steam" and DB "Mass gas/liquid", the following applies:

- Only available for measuring instruments with the following communication protocols:
  - HART
  - PROFINET over Ethernet-APL
  - Modbus TCP over Ethernet-APL
- Oil-free or grease-free cleaning is not possible.

A0019211

*A* Minimum spacing in all directions

*L* Required cable length

The following dimensions must be observed to guarantee problem-free access to the device for service purposes:

- $A = 100 \text{ mm}$  (3.94 in)
- $L = L + 150 \text{ mm}$  (5.91 in)

### Inlet and outlet runs

To achieve the specified measurement accuracy of the measuring instrument, observe at least the inlet and outlet runs listed below.

A0019189

**12** Minimum inlet and outlet runs with various flow obstructions

*h* Difference in expansion

1 Reduction by one nominal diameter size

2 Single elbow (90° elbow)

3 Double elbow (2 × 90° elbows, opposite)

4 Double elbow 3D (2 × 90° elbows, opposite, not on one plane)

5 T-piece

6 Expansion

7 Control valve

8 Two measuring instruments in a row where  $DN \leq 25$  (1''): directly flange on flange

9 Two measuring instruments in a row where  $DN \geq 40$  (1 1/2''): for spacing; see graphic

■ If there are several flow disturbances present, the longest specified inlet run must be maintained.

■ If the required inlet runs cannot be observed, it is possible to install a specially designed flow conditioner → 50.

The **inlet run correction** function:

■ Makes it possible to shorten the inlet run to a minimum length of  $10 \times DN$  in the event of flow obstructions 1 to 4. An additional measurement uncertainty of  $\pm 0.5\%$  o.r. occurs here.

■ Cannot be combined with the **wet steam detection/measurement** → 98 application package. If wet steam detection/measurement is used, the corresponding inlet runs must be taken into consideration. It is not possible to use a flow conditioner for wet steam.

### Flow conditioner

If the inlet runs cannot be observed, the use of a flow conditioner is recommended.

The flow conditioner is fitted between two pipe flanges and centered by the mounting bolts. Generally this reduces the inlet run needed to  $10 \times DN$  with full measurement accuracy.

A0019208

### 1 Flow conditioner

The pressure loss for flow conditioners is calculated as follows:

$$\Delta p \text{ [mbar]} = 0.0085 \cdot \rho \text{ [kg/m}^3\text{]} \cdot v^2 \text{ [m/s]}$$

#### Example for steam

$p = 10 \text{ bar abs.}$

$t = 240 \text{ }^\circ\text{C} \rightarrow \rho = 4.39 \text{ kg/m}^3$

$v = 40 \text{ m/s}$

$$\Delta p = 0.0085 \cdot 4.39 \cdot 40^2 = 59.7 \text{ mbar}$$

#### Example for H<sub>2</sub>O condensate (80 °C)

$\rho = 965 \text{ kg/m}^3$

$v = 2.5 \text{ m/s}$

$$\Delta p = 0.0085 \cdot 965 \cdot 2.5^2 = 51.3 \text{ mbar}$$

$\rho$  : density of the process medium

$v$ : average flow velocity

abs. = absolute

- A specially designed flow conditioner is available as an accessory → 101.
- Dimensions of the flow conditioner → 69.

### Outlet runs when installing external devices

If installing an external device, observe the specified distance.

A0019205

PT Pressure

TT Temperature device

### Length of connecting cable

To ensure correct measuring results when using the remote version:

- Observe the maximum permitted cable length:  $L_{\text{max}} = 30 \text{ m (90 ft)}$ .
- The value for the cable length must be calculated if the cable cross-section differs from the specification.

For detailed information about calculating the length of the connecting cable, refer to the Operating Instructions for the device.

## Installing the transmitter housing

### Wall mounting

A0033484

13 mm (in)

### Pipe mounting

A0033486

14 mm (in)

### Protective cover

A protective cover is available as an accessory for the device. It is used to protect against direct sunlight, precipitation and ice.

When installing the protective cover, a minimum upward clearance must be maintained:  
222 mm (8.74 in)

The protective cover can be ordered via the product structure together with the device:  
Order code for "Accessories enclosed" option PB "Protective cover"

Ordered separately as an accessory → 100

Installation for delta heat measurements

- Order code for "Sensor version", option CA "Mass; 316L; 316L (integrated temperature measurement), -200 to +400 °C (-328 to +750 °F)"
  - Order code for "Sensor version", option CB "Mass; Alloy C22; 316L (integrated temperature measurement), -200 to +400 °C (-328 to +750 °F)"
  - Order code for "Sensor version", option CC "Mass; Alloy C22; Alloy C22 (integrated temperature measurement), -40 to +260 °C (-40 to +500 °F)"
  - Order code for "Sensor version", option DA "Mass steam; 316L; 316L (integrated pressure/temperature measurement), -200 to +400 °C (-328 to +750 °F)"
  - Order code for "Sensor version", option DB "Mass gas/liquid; 316L; 316L (integrated pressure/temperature measurement), -40 to +100 °C (-40 to +212 °F)"
- The second temperature measurement is taken using a separate temperature sensor. The measuring instrument reads in this value via a communication interface.
- In the case of saturated steam delta heat measurements, the measuring instrument must be installed on the steam side.
  - In the case of water delta heat measurements, the device can be installed on the cold or warm side.

1) Capacitance sensor

| Order code for "Sensor version; DSC sensor; measuring tube"                       |  |   |
|---|--|---|
| Option  | Description  | Medium temperature range  |
|  | For order code for "Sensor version; DSC sensor; measuring tube", option DA "Mass steam" and DB "Mass gas/liquid", the following applies: <ul style="list-style-type: none"> <li>Only available for measuring instruments with the following communication protocols:               <ul style="list-style-type: none"> <li>HART</li> <li>PROFINET over Ethernet-APL</li> <li>Modbus TCP over Ethernet-APL</li> </ul> </li> <li>Oil-free or grease-free cleaning is not possible.</li> </ul> |   |
| DA  | Mass steam; 316L; 316L   | –200 to +400 °C (–328 to +752 °F), stainless steel <sup>1) 2)</sup> |
| DB  | Mass gas/liquid; 316L; 316L  | –40 to +100 °C (–40 to +212 °F), stainless steel <sup>2)</sup>      |

1) Siphon enables use for extended temperature range (up to +400 °C (+752 °F)).

2) In steam applications, in conjunction with the siphon, the steam temperature may be higher (up to +400 °C (+752 °F)) than the permitted temperature of the pressure measuring cell. Without a siphon, the gas temperature is limited by the maximum permitted temperature of the pressure measuring cell. This applies regardless of whether or not a stop cock is present.

#### Pressure measuring cell

| Order code for "Pressure component" |  |                                 |
|-------------------------------------|--|---------------------------------|
| Option                              | Description                                | Medium temperature range        |
| B                                   | Pressure measuring cell 2bar/29psi abs     | –40 to +100 °C (–40 to +212 °F) |
| C                                   | Pressure measuring cell 4bar/58psi abs     |                                 |
| D                                   | Pressure measuring cell 10bar/145psi abs   |                                 |
| E                                   | Pressure measuring cell 40bar/580psi abs   |                                 |
| F                                   | Pressure measuring cell 100bar/1450psi abs |                                 |

#### Seals

| Order code for "DSC sensor seal" |             |                                   |
|----------------------------------|-------------|-----------------------------------|
| Option                           | Description | Medium temperature range          |
| A                                | Graphite    | –200 to +400 °C (–328 to +752 °F) |
| B                                | Viton       | –15 to +175 °C (+5 to +347 °F)    |
| C                                | Gylon       | –200 to +260 °C (–328 to +500 °F) |
| D                                | Kalrez      | –20 to +275 °C (–4 to +527 °F)    |

#### Pressure/temperature ratings

The following pressure/temperature diagrams apply to all pressure-bearing parts of the device and not just the process connection. The diagrams show the maximum permissible medium pressure depending on the specific medium temperature.

The pressure-temperature rating for the specific measuring device is programmed into the software. If values exceed the curve range a warning is displayed. Depending on the system configuration and sensor version, the pressure and temperature are determined by entering, reading in or calculating values.

 Integral mass vortex: The permitted pressure for the measuring device can be less than indicated in this section, depending on the selected pressure measuring cell. →  59

Flange connection: flange similar to EN 1092-1 (DIN 2501)

16 Flange connection material: stainless steel, multiple certifications, 1.4404/F316/F316L

17 Flange connection material: cast alloy, 2.4602/UNS N06022 similar to Alloy C22/2.4602

**i** For DIN EN flanges: pressure/temperature rating similar to DIN EN 1092-1 (2018), material group 13E0

Flange connection: flange similar to ASME B16.5

A0034051-EN

18 Flange connection material: stainless steel, multiple certifications, 1.4404/F316/F316L

**i** For ASME flanges: pressure/temperature curve similar to ASME B16.5 (2017), material group 2.2

A0034046-EN

19 Flange connection material: cast alloy, CX2MW similar to Alloy C22/2.4602

Flange connection: flange similar to JIS B2220

20 Flange connection material: stainless steel, multiple certifications, 1.4404/F316/F316L

21 Flange connection material: cast alloy, CX2MW similar to Alloy C22/2.4602

**i** For JIS flanges: pressure/temperature rating similar to JIS B2220 (2012), material group 2.2, division 1

Nominal pressure of sensor

The following overpressure resistance values apply to the sensor shaft in the event of a membrane rupture:

| Sensor version; DSC sensor; measuring tube  | Overpressure, sensor shaft in [bar a] |
|---|---------------------------------------|
| Volume  | 200                                   |
| Volume high-temperature   | 200                                   |
| Mass (integrated temperature measurement)   | 200                                   |
| Mass steam (integrated pressure/temperature measurement)<br>Mass gas/liquid (integrated pressure/temperature measurement) | 200                                   |

Pressure specifications

**i** For order code for "Sensor version; DSC sensor; measuring tube", option DA "Mass steam" and DB "Mass gas/liquid", the following applies:

- Only available for measuring instruments with the following communication protocols:
  - HART
  - PROFINET over Ethernet-APL
  - Modbus TCP over Ethernet-APL
- Oil-free or grease-free cleaning is not possible.

The OPL (over pressure limit = sensor overload limit) for the measuring instrument depends on the lowest-rated element, with regard to pressure, of the selected components, i.e. the process

connection has to be taken into consideration in addition to the measuring cell. Also observe pressure-temperature dependency. For the appropriate standards and further information → 43. The OPL may only be applied for a limited period of time.

The MWP (maximum working pressure) for the sensors depends on the lowest-rated element, with regard to pressure, of the selected components, i.e. the process connection has to be taken into consideration in addition to the measuring cell. Also observe pressure-temperature dependency. For the appropriate standards and further information → 43. The MWP may be applied at the device for an unlimited period. The MWP can also be found on the nameplate.

### **⚠ WARNING**

**The maximum pressure for the measuring instrument depends on the lowest-rated element with regard to pressure.**

- ▶ Note specifications regarding pressure range → 43.
- ▶ The Pressure Equipment Directive (2014/68/EU) uses the abbreviation "PS". The abbreviation "PS" corresponds to the MWP of the device.
- ▶ MWP: The MWP is indicated on the nameplate. This value refers to a reference temperature of +20 °C (+68°F) and may be applied to the device for an unlimited time. Note temperature dependence of MWP.
- ▶ OPL: The test pressure corresponds to the over pressure limit of the sensor and may be applied only temporarily to ensure that the measurement is within the specifications and no permanent damage occurs. In the case of sensor range and process connection combinations where the OPL of the process connection is less than the nominal value of the sensor, the device is set at the factory, at the very maximum, to the OPL value of the process connection. If using the entire sensor range, select a process connection with a higher OPL value.

| Sensor              | Maximum sensor measuring range |               | MWP          | OPL         |
|---------------------|--------------------------------|---------------|--------------|-------------|
|                     | Lower (LRL)                    | Upper (URL)   |              |             |
|                     | [bar (psi)]                    | [bar (psi)]   |              |             |
| 2 bar (30 psi)      | 0 (0)                          | +2 (+30)      | 6.7 (100.5)  | 10 (150)    |
| 4 bar (60 psi)      | 0 (0)                          | +4 (+60)      | 10.7 (160.5) | 16 (240)    |
| 10 bar (150 psi)    | 0 (0)                          | +10 (+150)    | 25 (375)     | 40 (600)    |
| 40 bar (600 psi)    | 0 (0)                          | +40 (+600)    | 100 (1 500)  | 160 (2 400) |
| 100 bar (1 500 psi) | 0 (0)                          | +100 (+1 500) | 100 (1 500)  | 160 (2 400) |

### Pressure loss

For a precise calculation, use the Applicator → 102.

### Thermal insulation

For optimum temperature measurement and mass calculation, heat transfer at the sensor must be avoided for some fluids. This can be ensured by installing thermal insulation. A wide range of materials can be used for the required insulation.

This applies for:

- Compact version
- Remote sensor version

The maximum insulation height permitted is illustrated in the diagram:

A0019212

1 Maximum insulation height

- ▶ When insulating, ensure that a sufficiently large area of the housing support remains exposed.

The uncovered part serves as a radiator and protects the electronics from overheating and excessive cooling.

**i** The function of the siphon is to protect the pressure measuring cell from excessively high steam process temperatures through the formation of condensate in the U-tube/circular pipe. To ensure the steam condenses, the siphon may only be insulated as far as the connection flange on the measuring tube side.

A0047532

22 Siphon

## Mechanical construction

### Dimensions in SI units

**i** Pay attention to the information on diameter mismatch correction → 44.

### Compact version

Order code for "Housing", option B "GT18 dual compartment, 316L, compact"; option C "GT20 dual compartment, aluminum, coated, compact"

2) The flow conditioner is fitted at the indentations between the bolts.

Pressure measuring cell

 For order code for "Sensor version; DSC sensor; measuring tube", option DA "Mass steam" and DB "Mass gas/liquid", the following applies:

- Only available for measuring instruments with the following communication protocols:
  - HART
  - PROFINET over Ethernet-APL
  - Modbus TCP over Ethernet-APL
- Oil-free or grease-free cleaning is not possible.

A0033851

2) The flow conditioner is fitted at the indentations between the bolts.

#### Pressure measuring cell

For order code for "Sensor version; DSC sensor; measuring tube", option DA "Mass steam" and DB "Mass gas/liquid", the following applies:

- Only available for measuring instruments with the following communication protocols:
  - HART
  - PROFINET over Ethernet-APL
  - Modbus TCP over Ethernet-APL
- Oil-free or grease-free cleaning is not possible.

Order code for "Sensor version; DSC sensor; measuring tube":

Option DA "Mass steam; 316L; 316L (integrated pressure/temperature measurement)"

**Materials****Transmitter housing***Compact version*

- Order code for "Housing", option B "GT18 two-chamber, 316L, compact":  
Stainless steel, CF3M
- Order code for "Housing", option C "GT20, two-chamber, aluminum, coated, compact":  
Aluminum, AlSi10Mg, coated
- Window material: glass

*Remote version*

- Order code for "Housing" option J "GT20 two-chamber, aluminum, coated, remote":  
Aluminum, AlSi10Mg, coated
- Order code for "Housing", option K "GT18 two-chamber, 316L, remote":  
For maximum corrosion resistance: Stainless steel, CF3M
- Window material: glass

## Cable entries/cable glands

A0028352

27 Possible cable entries/cable glands

- 1 Internal thread M20 × 1.5
- 2 Cable gland M20 × 1.5
- 3 Adapter for cable entry with internal thread G ½" or NPT ½"
- 4 Device plug

Order code for "Housing", option B "GT18 dual compartment, 316L, compact" option K "GT18 dual compartment, 316L, remote"

| Cable entry/cable gland                             | Type of protection  | Material                       |
|---|---|--------------------------------|
| Cable gland M20 × 1.5                               | <ul style="list-style-type: none"> <li>■ Non-hazardous area</li> <li>■ Ex ia</li> <li>■ Ex ic</li> <li>■ Ex nA, Ex ec</li> <li>■ Ex tb</li> </ul> | Stainless steel ,1.4404        |
| Adapter for cable entry with internal thread G ½"   | Non-hazardous area and hazardous area (except for XP)   | Stainless steel, 1.4404 (316L) |
| Adapter for cable entry with internal thread NPT ½" | Non-hazardous area and hazardous area   |                                |

Order code for "Housing": option C "GT20 dual compartment, aluminum, coated, compact", option J "GT20 dual compartment, aluminum, coated remote"

**i** Applies also to the following device versions in combination with HART communication mode:  
 Order code for "Sensor version; DSC sensor; measuring tube", option DA "Mass steam; 316L; 316L", option DB "Mass gas/liquid; 316L; 316L"

| Cable entry/cable gland                             | Type of protection   | Material            |
|---|--|---------------------|
| Cable gland M20 × 1.5                               | <ul style="list-style-type: none"> <li>■ Non-hazardous area</li> <li>■ Ex ia</li> <li>■ Ex ic</li> </ul> | Plastic             |
|   | Adapter for cable entry with internal thread G ½"  | Nickel-plated brass |
| Adapter for cable entry with internal thread NPT ½" | Non-hazardous area and hazardous area (except for XP)  | Nickel-plated brass |
| Thread NPT ½" via adapter                           | Non-hazardous area and hazardous area  |                     |

## Connecting cable for remote version

- Standard cable: PVC cable with copper shield
- Reinforced cable: PVC cable with copper shield and additional steel wire braided jacket

**Connecting cable, pressure measuring cell**

For order code for "Sensor version; DSC sensor; measuring tube", option DA "Mass steam" and DB "Mass gas/liquid", the following applies:

- Only available for measuring instruments with the following communication protocols:
  - HART
  - PROFINET over Ethernet-APL
  - Modbus TCP over Ethernet-APL
- Oil-free or grease-free cleaning is not possible.

Standard cable: PVC cable with copper shield

**Sensor connection housing**

The material of the sensor connection housing is dependent on the material selected for the transmitter housing.

- Order code for "Housing" option J "GT20 two-chamber, aluminum, coated, remote":  
Coated aluminum AlSi10Mg
- Order code for "Housing", option K "GT18 two-chamber, 316L, remote":  
Stainless cast steel, 1.4408 (CF3M)  
Compliant with:
  - NACE MR0175
  - NACE MR0103

**Measuring tubes**

**DN 15 to 300 (½ to 12"), pressure ratings PN 10/16/25/40 /63/100, Class 150/300 /600 , as well as JIS 10K/20K**

- Stainless cast steel, CF3M/1.4408
- Compliant with:
  - NACE MR0175-2003
  - NACE MR0103-2003
- DN15 to 150 (½ to 6"): AD2000, permitted temperature range -10 to +400 °C (+14 to +752 °F) restricted

**DN 15 to 150 (½ to 6"), pressure ratings PN 10/16/25/40, Class 150/300:**

- CX2MW similar to Alloy C22/2.4602
- Compliant with:
  - NACE MR0175-2003
  - NACE MR0103-2003

**DSC sensor**

Order code for "Sensor version; DSC sensor; measuring tube", option **AA, BA, CA, DA, DB**

**Pressure ratings PN 10/16/25/40/63/100, Class 150/300/600, as well as JIS 10K/20K:**

Parts in contact with medium (marked as "wet" on the DSC sensor flange):

- Stainless steel 1.4404 and 316 and 316L
- Compliant with:
  - NACE MR0175/ISO 15156-2015
  - NACE MR0103/ISO 17945-2015

Parts not in contact with medium:

Stainless steel 1.4301 (304)

Order code for "Sensor version; DSC sensor; measuring tube", option **AB, AC, BB, CB, CC**

**Pressure ratings PN 10/16/25/40/63/100, Class 150/300/600, as well as JIS 10K/20K:**

Parts in contact with medium (marked as "wet" on the DSC sensor flange):

- Alloy C22, UNS N06022 similar to Alloy C22/2.4602
- Compliant with:
  - NACE MR0175/ISO 15156-2015
  - NACE MR0103/ISO 17945-2015

Parts not in contact with medium:

Alloy C22, UNS N06022 similar to Alloy C22/2.4602

### Pressure measuring cell

 For order code for "Sensor version; DSC sensor; measuring tube", option DA "Mass steam" and DB "Mass gas/liquid", the following applies:

- Only available for measuring instruments with the following communication protocols:
  - HART
  - PROFINET over Ethernet-APL
  - Modbus TCP over Ethernet-APL
- Oil-free or grease-free cleaning is not possible.
- Wetted parts:
  - Process connection  
Stainless steel, 1.4404/316L
  - Membrane  
Stainless steel, 1.4435/316L
- Non-wetted parts:
  - Housing  
Stainless steel, 1.4404

Order code for "Sensor version; DSC sensor; measuring tube", option DA, DB

- Connection on meter body: Stainless steel, 1.4404/316/316L
- Connection on siphon <sup>6)</sup>: Stainless steel, 316/316L  
Siphon: Stainless steel, 1.4571
- Clamping sleeve: Stainless steel: 1.4571 (316Ti)
- Seals on meter body siphon: Sigraflex foil Z TM (BAM-certified (Federal Institute for Materials Research and Testing) for oxygen applications)
- Manometer valve:
  - PTFE (polytetrafluoro-ethylene)
  - Stainless steel, 1.4571 <sup>7)</sup>
- Pressure measuring cell manometer valve: Copper

### Process connections

**DN 15 to 300 (½ to 12"), pressure ratings PN 10/16/25/40/63/100, Class 150/300/600, as well as JIS 10K/20K:**

Welding neck flanges DN 15 to 300 (½ to 12")

Compliant with:

NACE MR0175-2003

NACE MR0103-2003

The following materials are available depending on the pressure rating:

- Stainless steel, multiple certifications, 1.4404/F316/F316L)
- Alloy C22/2.4602

 Available process connections →  89

### Seals

- Graphite  
Sigraflex foil Z<sup>TM</sup> (BAM-certified for oxygen applications)
- FPM (Viton<sup>TM</sup>)
- Kalrez 6375<sup>TM</sup>
- Gylon 3504<sup>TM</sup> (BAM-certified for oxygen applications)

Order code for "Sensor version; DSC sensor; measuring tube", option DA, DB

Copper

 The technical tightness of tightness class L0.01 according to the TA-Luft regulation (Technical Instructions on Air Quality Control of December 1, 2021; Section 5.2.6.3 Flange connections), with a corresponding specific leakage rate of less than 0.01 mg/(s·m) was verified by means of type-based component tests at a test pressure of 40 bar<sub>a</sub>.

### Housing support

Stainless steel, 1.4408 (CF3M)

6) Only available with order code for "Sensor version; DSC sensor; measuring tube", option DA.

7) Only for the order code for "Additional approval", option LV IBR: 316ti

**Screws for DSC sensor**

- Order code for "Sensor version", option AA "Stainless steel, A4-80 according to ISO 3506-1 (316)"
- Order code for "Sensor version", option BA, CA, DA, DB  
Stainless steel, A2 as per ISO 3506-1 (304)
- Order code for "Additional approval", option LL "AD 2000 (including option JA+JB+JK) > DN25 including option LK"  
Stainless steel, A4 as per ISO 3506-1 (316)
- Order code for "Sensor version", option AB, AC, BB, CB, CC  
Stainless steel, 1.4980 according to EN 10269 (Gr. 660 B)

**Accessories***Protective cover*

Stainless steel, 1.4404 (316L)

*Flow conditioner*

- Stainless steel: 1.4404 (316/316L)
- Compliant with:
  - NACE MR0175-2003
  - NACE MR0103-2003

---

**Flange connections**

Flange connection dimensions and raised face in accordance with:

- DIN EN 1092-1
- ASME B16.5
- JIS B2220

For information on the different materials used in the process connections

## Operability

---

**Operating concept****Operator-oriented menu structure for user-specific tasks**

- Commissioning
- Operation
- Diagnostics
- Expert level

**Quick and safe commissioning**

- Guided menus ("Make-it-run" wizards) for applications
- Menu guidance with brief descriptions of the individual parameter functions

**Reliable operation**

- Operation in the following languages:
  - Via local display:  
English, German, French, Spanish, Italian, Portuguese, Polish, Russian, Turkish, Chinese, Bahasa (Indonesian)
  - Via "FieldCare" operating tool:  
English, German, French, Spanish, Italian, Chinese
- Uniform operating philosophy applied to device and operating tools
- If replacing the electronic module, transfer the device configuration via the integrated memory (integrated HistoROM) which contains the process and measuring device data. No need to reconfigure.

**Efficient diagnostic behavior increases measurement availability**

- Troubleshooting measures can be called up via the device and in the operating tools
- Diverse simulation options for events that occur and optional line recorder functions

---

**Languages**

Can be operated in the following languages:

- Via local display:  
English, German, French, Spanish, Italian, Portuguese, Polish, Russian, Turkish, Chinese, Bahasa (Indonesian)
- Via "FieldCare" operating tool:  
English, German, French, Spanish, Italian, Chinese

**Onsite operation****Via display module**

Two display modules are available:

| Order code for "Display; Operation", option C "SD02"  | Order code for "Display; Operation", option E "SD03"  |
|---|---|
|  <p>A0032219</p> |  <p>A0032221</p> |
| 1 Operation with pushbuttons  | 1 Operation with touch control  |

*Display elements*

- 4-line, illuminated, graphic display
- White background lighting; switches to red in event of device errors
- Format for displaying measured variables and status variables can be individually configured

*Operating elements*

- Operation with 3 push buttons with open housing: , , 
- or
- External operation via touch control (3 optical keys) without opening the housing: , , 
- Operating elements also accessible in the various zones of the hazardous area

*Additional functionality*

- Data backup function  
The device configuration can be saved in the display module.
- Data comparison function  
The device configuration saved in the display module can be compared to the current device configuration.
- Data transfer function  
The transmitter configuration can be transmitted to another device using the display module.

**Via remote display FHX50**

-  The remote display FHX50 can be ordered as an optional extra →  100.
- The remote display FHX50 cannot be combined with the order code for "Sensor version; DSC sensor; measuring tube", option DA "mass steam" or option DB "mass gas/liquid".

A0032215

28 FHX50 operating options

- 1 SD02 display and operating module, push buttons: cover must be opened for operation
- 2 SD03 display and operating module, optical buttons: operation possible through cover glass

#### Display and operating elements

The display and operating elements correspond to those of the display module .

### Remote operation

#### Via HART protocol

This communication interface is available in device versions with a HART output.

A0028746

29 Options for remote operation via HART protocol (passive)

- 1 Automation system (e.g. PLC)
- 2 Transmitter power supply unit, e.g. RN221N (with communication resistor)
- 3 Connection for Commubox FXA195 and Field Communicator 475
- 4 Field Communicator 475
- 5 Computer with Web browser (e.g. Internet Explorer) for accessing computers with an operating tool (e.g. FieldCare, DeviceCare, AMS Device Manager, AMS TREX Device Communicator, SIMATIC PDM) with COM DTM "CDI Communication TCP/IP"
- 6 Commubox FXA195 (USB)
- 7 Field Xpert SFX350 or SFX370
- 8 Field Xpert SMT50 (or 70 or 77)
- 9 VIATOR Bluetooth modem with connecting cable
- 10 Transmitter

#### Via PROFIBUS PA network

This communication interface is available in device versions with PROFIBUS PA.

A0028838

30 Options for remote operation via PROFIBUS PA network

- 1 Automation system
- 2 Computer with PROFIBUS network card
- 3 PROFIBUS DP network
- 4 Segment coupler PROFIBUS DP/PA
- 5 PROFIBUS PA network
- 6 T-box
- 7 Measuring instrument

#### Via FOUNDATION Fieldbus network

This communication interface is available in device versions with FOUNDATION Fieldbus.

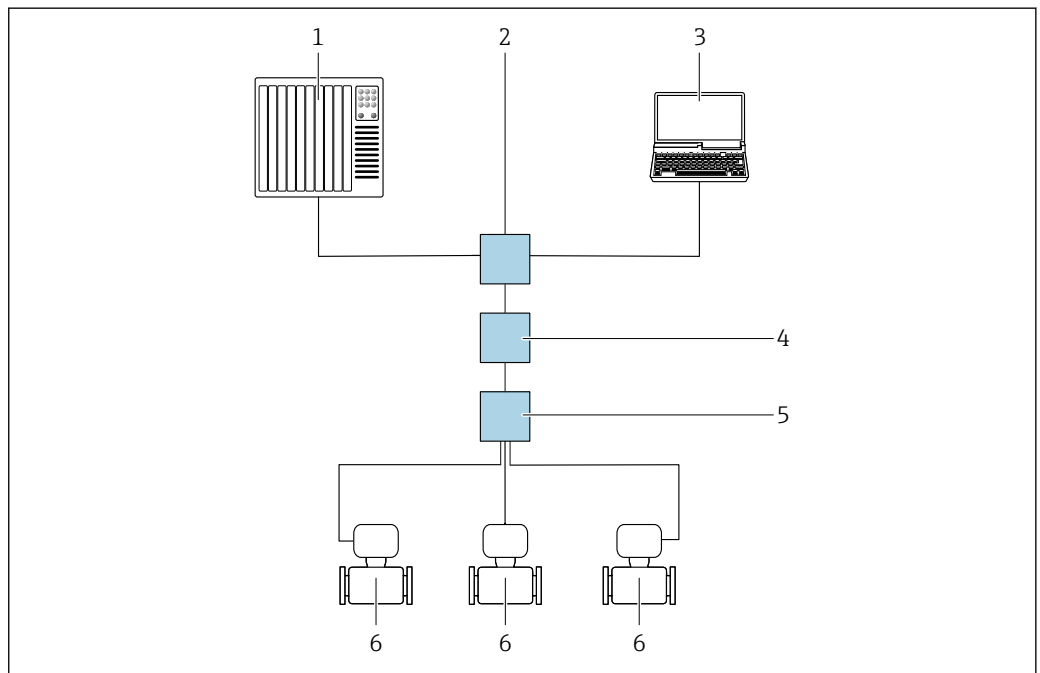

A0028837

31 Options for remote operation via FOUNDATION Fieldbus network

- 1 Automation system
- 2 Computer with FOUNDATION Fieldbus network card
- 3 Industry network
- 4 High Speed Ethernet FF-HSE network
- 5 Segment coupler FF-HSE/FF-H1
- 6 FOUNDATION Fieldbus FF-H1 network
- 7 Power supply FF-H1 network
- 8 T-box
- 9 Measuring instrument

### Via Modbus TCP over Ethernet-APL 10 Mbit/s, SPE 10 Mbit/s

This communication interface is available on port 1 in device versions with a Modbus TCP over Ethernet-APL output.

A0046117

32 Options for remote operation via Modbus TCP over Ethernet-APL protocol (active)

- 1 Automation system, e.g. Simatic S7 (Siemens)
- 2 Ethernet switch, e.g. Scalance X204 (Siemens)
- 3 Computer with web browser or operating tool
- 4 APL power switch/SPE power switch (optional)
- 5 APL field switch/SPE field switch
- 6 Measuring instrument/communication via port 1 (terminal 1 + 2)

### Service interface

#### Via service interface (CDI)

A0034056

- 1 Service interface (CDI = Endress+Hauser Common Data Interface) of the measuring instrument
- 2 Commubox FXA291
- 3 Computer with operating tool (e.g. FieldCare or DeviceCare) and (CDI) DeviceDTM

## Via PROFINET over Ethernet-APL 10 Mbit/s, SPE 10 Mbit/s

A0046859

- 1 Automation system, e.g. Simatic S7 (Siemens)
- 2 Ethernet Switch, e.g. Scalance X204 (Siemens)
- 3 Computer with operating tool (e.g. FieldCare or DeviceCare) and (CDI) DeviceDTM
- 4 Ethernet cable with RJ45 plug
- 5 APL field switch
- 6 2-wire fieldbus cable type A
- 7 Measuring instrument

## Supported operating tools

Different operating tools can be used for local or remote access to the measuring device. Depending on the operating tool used, access is possible with different operating units and via a variety of interfaces.

| Supported operating tools | Operating unit                                       | Interface             | Additional information   |
|---------------------------|--|-----------------------|--|
| DeviceCare SFE100         | Notebook, PC or tablet with Microsoft Windows system | CDI service interface | → 102  |
| FieldCare SFE500          | Notebook, PC or tablet with Microsoft Windows system | CDI service interface | → 102  |
| Field Xpert               | SMT70/77/50  | CDI service interface | Operating Instructions BA01202S<br>Device description files:<br>Use update function of handheld terminal |

Other operating tools based on FDT technology with a device driver such as DTM/iDTM or DD/EDD can be used for device operation. These operating tools are available from the individual manufacturers. Integration into the following operating tools, among others, is supported:

- FactoryTalk AssetCentre (FTAC) from Rockwell Automation → [www.rockwellautomation.com](http://www.rockwellautomation.com)
- Process Device Manager (PDM) from Siemens → [www.siemens.com](http://www.siemens.com)
- Asset Management Solutions (AMS) from Emerson → [www.emersonprocess.com](http://www.emersonprocess.com)
- FieldCommunicator 375/475 from Emerson → [www.emersonprocess.com](http://www.emersonprocess.com)
- Emersons TREX → [www.emerson.com](http://www.emerson.com)
- Field Device Manager (FDM) from Honeywell → [www.process.honeywell.com](http://www.process.honeywell.com)
- FieldMate from Yokogawa → [www.yokogawa.com](http://www.yokogawa.com)
- PACTWare → [www.pactware.com](http://www.pactware.com)

The related device description files are available: [www.endress.com](http://www.endress.com) → Download Area

**Web server**

Thanks to the integrated web server, the device can be operated and configured using a web browser via PROFINET over Ethernet-APL or Ethernet-APL. In addition to the measured values, status information on the device is displayed and can be used to monitor device health. Furthermore the device data can be managed and the network parameters can be configured.

Access to the network is required for the APL connection.

*Supported functions*

Data exchange between the operating unit (such as a notebook for example) and the measuring instrument:

- Upload the configuration from the measuring instrument (XML format, configuration backup).
- Save the configuration to the measuring instrument (XML format, restore configuration).
- Export parameter settings (.csv file or PDF file, document the measuring point configuration)
- Export the Heartbeat verification log (PDF file, only available with the "Heartbeat Verification" application package)
- Download driver (GSD) for system integration

## Certificates and approvals

Current certificates and approvals for the product are available at [www.endress.com](http://www.endress.com) on the relevant product page:

1. Select the product using the filters and search field.
2. Open the product page.
3. Select **Downloads**.

---

**CE mark**

The device meets the legal requirements of the applicable EU Directives. These are listed in the corresponding EU Declaration of Conformity along with the standards applied.

Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.

---

**UKCA marking**

The device meets the legal requirements of the applicable UK regulations (Statutory Instruments). These are listed in the UKCA Declaration of Conformity along with the designated standards. By selecting the order option for UKCA marking, Endress+Hauser confirms a successful evaluation and testing of the device by affixing the UKCA mark.

Contact address Endress+Hauser UK:  
Endress+Hauser Ltd.  
Floats Road  
Manchester M23 9NF  
United Kingdom  
[www.uk.endress.com](http://www.uk.endress.com)

---

**RCM marking**

The measuring system meets the EMC requirements of the "Australian Communications and Media Authority (ACMA)".

---

**Ex approval**

The measuring device is certified for use in hazardous areas and the relevant safety instructions are provided in the separate "Safety Instructions" (XA) document. Reference is made to this document on the nameplate.

The separate Ex documentation (XA) containing all the relevant explosion protection data is available from your Endress+Hauser sales center.

---

**Functional safety**

The measuring instrument can be used for flow monitoring systems (min., max., range) up to SIL 2 (single-channel architecture; order code for "Additional approval", option LA) and SIL 3 (multi-channel architecture with homogeneous redundancy) and is independently evaluated and certified in accordance with IEC 61508.

The following types of monitoring in safety equipment are possible:

Functional safety manual with information for the SIL device

|   |   |
|---|---|
| <b>HART certification</b>                       | <p><b>HART interface</b></p> <p>The measuring device is certified and registered by the FieldComm Group. The measuring system meets all the requirements of the following specifications:</p> <ul style="list-style-type: none"> <li>■ Certified according to HART</li> <li>■ The device can also be operated with certified devices of other manufacturers (interoperability)</li> </ul>   |

## Ordering information

Detailed ordering information is available from your nearest sales organization [www.addresses.endress.com](http://www.addresses.endress.com) or in the Product Configurator at [www.endress.com](http://www.endress.com):

1. Select the product using the filters and search field.
2. Open the product page.
3. Select **Configuration**.

**Product Configurator - the tool for individual product configuration**

- Up-to-the-minute configuration data
- Depending on the device: direct input of information specific to the measuring point, such as the measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly in the Endress+Hauser Online Shop

**Product generation index**

| Release date | Product root | Change   |
|--------------|--------------|----------|
| 01.09.2013   | 7F2B         | TI01084D |
| 01.11.2017   | 7F2C         | TI01333D |
| 01.09.2025   | 7F2C         | TI01333D |

More information is available from your Sales Center or at:

[www.service.endress.com](http://www.service.endress.com) → Downloads

## Application packages

Many different application packages are available to enhance the functionality of the device. Such packages might be needed to address safety aspects or specific application requirements.

The application packages can be ordered with the device or subsequently from Endress+Hauser. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: [www.endress.com](http://www.endress.com).

Detailed information on the application packages:

Special Documentation → 104

**Diagnostic functionality**

Order code for "Application package", option EA "Extended HistoROM"

Comprises extended functions concerning the event log and the activation of the measured value memory.

Event log:

Memory volume is extended from 20 message entries (standard version) to up to 100 entries.

Data logging (line recorder):

- Memory capacity for up to 1000 measured values is activated.
- 250 measured values can be output via each of the 4 memory channels. The recording interval can be defined and configured by the user.
- Measured value logs can be accessed via the local display or operating tool e.g. FieldCare, DeviceCare or Web server.

For detailed information, see the Operating Instructions for the device.

**Heartbeat Technology**

Order code for "Application package", option EB "Heartbeat Verification"

### Heartbeat Verification

Meets the requirement for traceable verification in accordance with DIN ISO 9001:2015

Clause 7.6 a) "Control of monitoring and measuring equipment"

- Functional testing in the installed state without interrupting the process.
- Traceable verification results on request, including a report.
- Simple testing process via local operation or other operating interfaces.
- Clear measuring point assessment (pass/fail) with high total test coverage within the framework of manufacturer specifications.
- Extension of calibration intervals according to operator's risk evaluation.

Detailed information on Heartbeat Technology:

Special Documentation → 104

**Wet steam detection**

Order code for "Application package", option ES "Wet steam detection"

Wet steam detection provides a qualitative parameter for monitoring the steam application. It is an additional indicator for checking steam quality. A warning is displayed as soon as the steam quality drops below  $x = 0.80$  (80%).

- Additional quality parameter for ensuring a safe and efficient steam process
- Additional indicator to monitor the operation of steam traps

For detailed information, see the Operating Instructions for the device.

---

#### **Wet steam measurement**

Order code for "Application package", option EU "Wet steam measurement"

Innovative measurement of the steam quality and degree of overheating.

The wet steam detection application package extends wet steam measurement to include the continuous display of the steam quality. The steam quality is used to calculate the correct volume flow and mass flow and can be assigned to outputs.

The condensate amount can be displayed. By evaluating the data, deviations in the process can be quickly detected.

- As the warning values can be freely defined, users have optimum control of the steam process.
- Additional quality parameter for ensuring a safe and efficient steam process.
- Additional indicator to monitor the operation of steam traps.
- Combined with active pressure compensation, the device guarantees correct steam measurement.
- Automatic calculation of the steam state and correct measurement of the steam amount.
- Automatic navigation through the steam areas (wet steam, saturated steam and superheated steam).

For detailed information, see the Operating Instructions for the device.

## **Accessories**

Various accessories, which can be ordered with the device or subsequently from Endress+Hauser, are available for the device. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: [www.endress.com](http://www.endress.com).

## Device-specific accessories

## For the transmitter

| Accessories                               | Description  |
|---|--|
| Prowirl 200 transmitter                   | <p>Transmitter for replacement or storage. Use the order code to define the following specifications:</p> <ul style="list-style-type: none"> <li>■ Approvals</li> <li>■ Output, input</li> <li>■ Display/operation</li> <li>■ Housing</li> <li>■ Software</li> </ul> <p> Installation Instructions EA01056D</p> <p> (Order number: 7X2CXX)</p>   |
| Remote display FHX50                      | <p>FHX50 housing for accommodating a display module .</p> <ul style="list-style-type: none"> <li>■ FHX50 housing suitable for: <ul style="list-style-type: none"> <li>■ SD02 display module (push buttons)</li> <li>■ SD03 display module (touch control)</li> </ul> </li> <li>■ Length of connecting cable: up to max. 60 m (196 ft)<br/>(cable lengths available for order: 5 m (16 ft), 10 m (32 ft), 20 m (65 ft), 30 m (98 ft))</li> </ul> <p>The measuring instrument can be ordered with the FHX50 housing and a display module. The following options must be selected in the separate order codes:</p> <ul style="list-style-type: none"> <li>■ Order code for measuring instrument, feature 030:<br/>Option L or M "Prepared for FHX50 display"</li> <li>■ Order code for FHX50 housing, feature 050 (measuring instrument version):<br/>Option A "Prepared for FHX50 display"</li> <li>■ Order code for FHX50 housing, depends on the desired display module in feature 020 (display, operation): <ul style="list-style-type: none"> <li>■ Option C: for an SD02 display module (push buttons)</li> <li>■ Option E: for an SD03 display module (touch control)</li> </ul> </li> </ul> <p>The FHX50 housing can also be ordered as a retrofit kit. The measuring instrument display module is used in the FHX50 housing. The following options must be selected in the order code for the FHX50 housing:</p> <ul style="list-style-type: none"> <li>■ Feature 050 (measuring instrument version): option B "Not prepared for FHX50 display"</li> <li>■ Feature 020 (display, operation): option A "None, existing displayed used"</li> </ul> <p> The FHX50 remote display cannot be combined with the order code for "Sensor version; DSC sensor; measuring tube":</p> <ul style="list-style-type: none"> <li>■ option DA "Mass steam; 316L; 316L (integrated pressure/temperature measurement), -200 to +400 °C (-328 to +750 °F)"</li> <li>■ option DB "Mass gas/liquid; 316L; 316L (integrated pressure/temperature measurement), -40 to +100 °C (-40 to +212 °F)"</li> </ul> <p> Special Documentation SD01007F</p> <p>(Order number: FHX50)</p> |
| Overvoltage protection for 2-wire devices | The use of an external overvoltage protection is recommended, e.g. HAW 569.  |
| Overvoltage protection for 2-wire devices | The use of an external overvoltage protection is recommended, e.g. HAW 569.  |
| Protective cover                          | <p>The protective cover is used to protect against direct sunlight, precipitation and ice. It can be ordered together with the device via the product structure:<br/>Order code for "Accessories enclosed" option PB "Protective cover"</p> <p> Special Documentation SD00333F</p> <p>(Order number: 71162242)</p>  |
| Transmitter holder (pipe mounting)        | <p>To secure the remote version to the pipe DN 20 to 80 (3/4 to 3")</p> <p>Order code for "Accessory enclosed", option PM</p>  |
