● Panel(Piping) Type Flowmeter

MADECO Instrumentation

Panel(Piping) Type flowmeter is also called the variable-area (or float) flowmeter. The material of measuring tube is made of High-quality and transparent lucite (cast acrylic) . This flowmeter is mainly applied to form a complete set in clean water treatment and environmental protection projects. It also can be used in chemical industry, petroleum, light industry, medicine, fertilizer, food, papermaking and scientific research, etc., to measure the single-phase non- pulsing flow of liquid and gas.

Panel(Piping) type flowmeter has the characteristics of high transparency, reading ocular, in rare cases to be broken, light weight, long-life, convenient for installation ect.,.

Technical Parameters

Normal flowrate range (flow water)	GPM	0.1~1	0.2~2	1~5	1~10	2~16	2~20	4~40	6~60	10~100	50~150
	LPM	0.5~4	1~7	2~18	5~35	4~60	10~70	15~150	25~250	50~350	190~550
Accuracy	±4%FS										
Repeatability	±0.25%FS										
Rangeability	10:1	10:1	5:1(10:1)	10:1	8:1	10:1	10:1	10:1	10:1	10:1	10:1
Maximum pressure	1MPa/150psig										
Maximum temperature	80°C/176° F										
Body material	PMMA(Lucite)										
Float material	316L(Stainless steel)										
Guide rod material	316L(Stainless steel)										
Fastening screw material	H62(Copper)										
Tube connection material	UPVC (Nonpoisonous) (Can be made of stainless steel or copper chromium)										
Upper and lower adapter bearing	F46										
O Shape sealing ring	Silicon rubber
